Prevention of Internal Flooding to Households from the Public Sewer

Thames Water, Southern Water... recommend the Jung Pumpen Compli Sewage Lifting station.

How the Jung Pumpen Compli Sewage Lifting Station solution works:

- 1** The gravity foul and surface water drainage from the property to the public sewer in the road is cut; a non-return valve, bypass pipework and a Compli Sewage Lifting Station is installed.
- 2** In the event of the public sewer becoming surcharged, the system prevents the sewage from entering the property.
- 3** Foul water and surface water from the property is diverted to the Compli Sewage Lifting Station and pumped at a higher pressure into the flooded public sewer.

***To discuss your requirements for the
“Prevention of Internal Flooding to Households
from the Public Sewer”
