Flood Water Emergency Kit

***FAST, Simple, Stress-free
Flood Water removal***

Be Prepared for the worst case scenario

BE PREPARED to cope with FLOODING

Now it's time to protect your property!.

This Pump Technology Flood Emergency Kit provides a powerful, durable Flood Pumping Solution –

The “Floodbox” helps people who are affected by flood water, to react quickly and efficiently.

Just put the carrying box with the pump on the ground and pump the water out of the building via the fire hose.

Even in dry seasons the “Floodbox” is a reliable assistant.

The heart of this emergency kit is the powerful multifunctional submersible pump U 5 KS. Taken out of the carrying box it can be used either stationary or as a portable tool for several kinds of pumping situations.

The components

U 5 KS

- High performance motor (H max 8m, Q max 11,5 m/h)
- Reliable pumping due to a large free solids passage of 20 mm
- A motor cooling jacket and a thermal motor protection enable continuous operation when the pump is not submerged
- A float switch for pumping down to a minimum of residual water

Fire hose, 12,5 m

- Quick and easy attachment by a C coupling
- Sturdy, durable material
- Space-saving storage when hose is rolled up
- Extendable with the standard C coupling

Carrying box

- Pump mounting stabilizes the pump while it is used within the box
- Protection against silting up
- Wall mounting for storing the “Floodbox”

Be prepared before disaster happens

The triple benefit:

Without carrying box

Naturally the U 5 KS can be used without the carrying box. To do this detach the metal clip on the pump handle and remove the pump.

Pumping to extra low levels

The foot strainer of the pump can be removed. The pump can now pump down to a minimum of residual water.

For larger solids

If you want to make use of the pump's free solids passage of 20 mm, remove the foot strainer and push the extensions supplied onto the pedestals.

JUNG PUMPEN has a long history of producing high-quality pumps and pumping stations both for small-scale domestic houses and land drainage and large-scale industrial and community waste water treatment.

JUNG PUMPEN has not only acquired an established market presence in the fields of domestic technology, sewage treatment and pressure drainage, but it has gone on to become one of the market leaders.

Floodbox

operation:

Three easy steps

■ Step 1: Attach the hose

■ Step 2: Switch on the pump

■ Step 3: Start pumping
