

Case Study

- **Project Location:**
New Build Basement to North West London Property
- **Requirements:**
Basement Wastewater &
Sewage Pumping for Kitchen & Toilet.
- **Date:**
February 2017

Pumpmatic Packaged Pump Station

The Client

South Quay Deco Ltd, specialise in the development and conversion of high-end residential housing, chiefly within the London area.

The Problem

Expanding living space in London now often means adding a basement. This lower level is typically designated as a kitchen, bathroom, toilet or utility room... all requiring their wastewater and sewage services to be pumped away.

The Solution

South Quay Deco Ltd knows that installing mechanical pumping equipment could potentially lead to problems so it needs to be right first time.

Gary Coles, Contracts Manager of South Quay says, "It's easier for us to call a pumping specialist and let them size the pumping chamber, select the pump or pumps and the required control panel or remote alarm system".

"For this, we asked Pump Technology Ltd to visit site and see first-hand the proposed location of the below-ground pumping chamber, the house requirements and possible site restriction".

"David Johnson, Pump Technology Ltd, attended site promptly following our call. He demonstrated the ability to understand the site requirements and then to clearly discuss with us the options and solutions suitable for our project".

"Delivery was, as promised, on time, safe and sound. The tank was nicely finished and the market leading submersible sewage pumps by KSB – Ama Porter, truly looked impressive and fit for purpose".

MORE

Case Study

“Pump Technology Ltd manufactures their own pumping chambers. This meant they were able to exactly customise the tank so it aligned with the site inlets and outlet which made installation simple and quick”.

“We had some additional commissioning requests. David was again contacted and we were able to arrange for an engineer to carry out a few extra tasks to finish the installation in a timely and professional manner”.

“The process of selecting, installing and commissioning our basement packaged pumping station, from the moment we contacted Pump Technology Ltd. has been very smooth”.

“It’s fair to say we have now adopted Pump Technology Ltd for all our basement wastewater and sewage pumping requirements.”

Equipment

- PumpMatic Packaged Pumping Station
- KSB Ama Porter Submersible Sewage Pumps
- Control Panel - Duty Standby & Remote Alarm

Pump Technology Ltd, is a leading manufacturer of packaged pumping stations for grey water, wastewater and sewage.

As a leading authorised KSB Partner, our pumping stations will included the Ama Porter or Ama Drainer pumps.
