

NEW PUMP TECHNOLOGY WEB SHOP FOR SANIFLO SFA PUMPING EQUIPMENT

After constant requests from customers and merchants, Aldermaston based pumping system specialist Pump Technology Ltd. has just launched its new Saniflo SFA online Web Shop.

The Web Shop includes domestic and commercial products and users can search via product description, application such as bathroom, kitchen etc., or category such as domestic, commercial or below ground pumping stations.

Of course, all the great old-fashioned service that the company is recognised for providing, i.e. immediately phone answering, connection to a knowledgeable pump engineer straight away and access to the company's "On Line Showroom" via face-to-face calling, remains just as great as always.

The online web shop will enable customers ordering like-for-like replacement or re-ordering equipment which they have used before to do so out of hours and without contacting the office. The new shop is designed to provide a more convenient platform for many of our customers when they are certain of their requirements.

Need some help? Just pick up the phone and call 0118 9821 555 to immediately speak with one the Pump Technology Ltd Team!

Pump Technology Ltd, is one of the UK's largest independent wastewater and sewage pump specialists, this year celebrating their 30th anniversary. They are also the largest stockist for Saniflo SFA and Zehnder Pumpen commercial and industrial pumping equipment, both floor mounted and below ground lifting stations. The Company is certain that the new Web Shop will provide customers with even greater, faster and more convenient access to this equipment.

PUTTING HOT WATER FIRST: NAVIEN ON OFFERS INFINITE POSSIBILITIES

Navien has renamed the two leading models in the range as the NCB700 ON and NCB500 ON respectively. This coincides with the company's introduction of 'Navien ON' – an advanced new technological concept dedicated to putting hot water first.

Navien's energy-saving boiler technology cleverly maximises recirculation of domestic hot water (DHW) while significantly reducing water wastage by up to 7,787 litres per year. Inspired by the infinity symbol and its similarity to the letters 'O' and 'N', the company created 'Navien ON'. This reflects the boilers' ability to deliver rapid hot water, constant temperatures and hot water for up to three showers at once.

The NCB700 ON combi gas boiler is the first product of its type capable of delivering hot water for up to three bathrooms simultaneously. Shattering all preconceptions of a combi boiler's suitability for large properties, the NCB700 ON cleverly maximises recirculation of domestic hot water (DHW) to significantly reduce water wastage and offer flow rates up to an industry-leading 22 litres per minute (at 35°C temperature rise). It also dramatically reduces gas usage, saving 38% on average per year.

The futureproof boiler also features an outstanding turndown ratio of 15:1, is hydrogen-ready (20% blend) and can also achieve ErP A+ when used with Navien's Smart Plus controller. It is available in two models capable of delivering up to 42kW and 54kW of hot water respectively.

In addition, the NCB500 ON can fit comfortably inside a cupboard with ease due to its compact 280mm depth, while this energy-saving boiler boasts the same high-quality construction as the NCB700 ON. It can achieve hot water outputs of up to 41kW while boasting an industry-leading ErP efficiency of 93%.
