

CHARCOVENT (Carbon/Charcoal Filter Breather System)

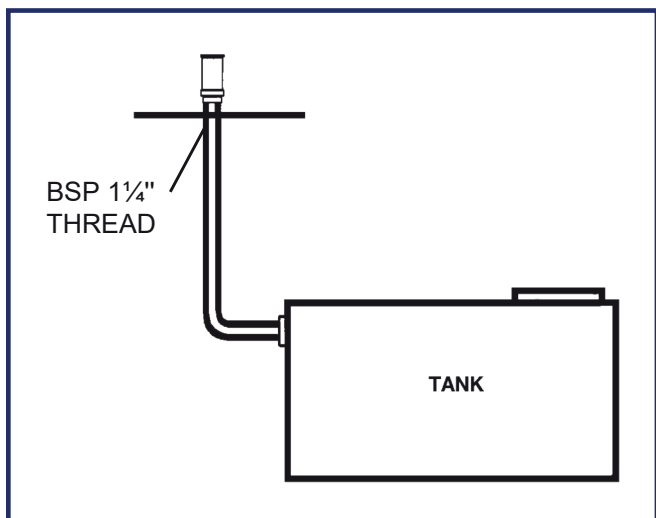

Charcovent Part No 900
(Carbon/Charcoal Filter Breather System)

General Description:

Carbon/Charcoal Filter Breather System for venting wastewater and sewage pumping systems where a vent to air, external to the building is not possible.
(All pumping systems require a vent)

The Charcovent contains an activated carbon filter with highly absorptive properties ideal for removing unpleasant odours and gaseous contaminants from an air stream.

The Charcovent allows two-way air passage to enable the pump unit to breathe and operate.

Note: -

The Charcovent should be fitted at the same height, or higher than the highest point of the discharge pipework.

Where possible vent unit into ceiling void or similar.

The Charcovent should be fitted to the tank using 1 1/4" pipework and a tank connector positioned through the side of the tank (Not through the lid) as high as possible from the base of the unit.
