Packaged pumping stations for housing and commercial buildings.

Right first time in
every way.

Expertise.

Pump Technology Ltd manufacture its own packaged pumping stations.

We have complete control over the construction, quality and on-time delivery of your pumping station enabling us to always provide you with the best, site-specific pumping station solution.

From the outset, pump selection and tank sizing are critical to the performance and reliability of your station. Our dedicated and expert pumping station team will work with you to ensure this package is always the technically and commercially correct solution for your project.

Collectively, the Pump Technology Ltd packaged pump team have decades of experience in pump station selection, build and maintenance.

Their knowledge relating to site visits, specification, manufacture, commissioning and after sales maintenance contracts, ensures that our team is renowned for their expertise and customer support.

Their goal is not just to offer the right solution, but to provide you with a project process that keeps you informed, is flexible to your requirements and is smooth from start to finish.

How can we prove this?

Simple, when you get to know the team at Pump Technology Ltd with a CPD, site visit, or a comprehensive project quote, we know that you will be impressed. We are sure you will find us reliable and true partners for your organisation.

Decades of proven pump experience

Individually, Bob, Steve and Paul have been working in the pump industry for many years. It is this experience that ensures that whatever we offer is technically and commercially correct first time for you.

In-house manufacture

Our GRP tanks are manufactured in our own facility. This ensures that standard or bespoke tanks are all equally easy for us to manufacture. It also means that we control all aspects of quality and inspection throughout the process.

On time delivery of your project

With in-house tank manufacture, we can also accurately schedule build and delivery times.

Commissioning

For the reliable operation and long life of the pumping station our commissioning engineers will ensure the installation is correct. This means that the pump station is optimised for reliability and long life.

Maintenance

Pump Technology Ltd's specialist maintenance company, Pump Technology Services Ltd, offer nationwide repair and maintenance for all pump stations.

They will provide a service tailored to each site to maintain it at maximum efficiency.

Replacement Parts

All of the components - Pumps, control panels, alarms, guide rails, pedestals, valves, covers, chain etc. are held in stock.

Ready for Installation

Packaged pump stations are delivered to site pre-manufactured and ready for installation.

They include internal guide rails, pedestals, discharge pipework and valves.

Once the tank is installed, all that remains is for the pumps to be lowered into position and connected to the control panel.

We also supply control panels, and kiosks

Our Packaged Pump Station Range

The Pump Technology Ltd packaged pump station range consists of a number of modular tank sizes. This ensures that bespoke tanks can quickly and easily be manufactured in our workshops when required.

Leading Independent Supplier

Being one of the leading independent suppliers of waste water and sewage equipment in the UK and authorised by the leading European pump manufactures, ensures that we can always build to meet your site requirements and budget.
