

A “One Stop Shop” for everything from Submersible Pumps to Pump Stations.

If a broken pump is the problem the Pump Technology Ltd. team will quickly identify it and provide a like for like replacement or, if that pump model has been superseded, an equivalent for fit and performance.

If the broken pump is part of a below-ground pumping station it might be that just replacing the pump will not be a viable solution alone. A pump station refurbishment or replacement might be the required course of action to ensure the customer has their reliable drainage system up and running again.

Before

After

Pump Technology Ltd, is not only an ideal source for submersible pumps, they also manufacture their own below ground pumping stations, known throughout the industry as the PumpMatic range.

This makes them the perfect “One Stop Pump Shop” for drainage companies. If pump station items such as, control panels, internal tank pipework, non-return valves, gate valves, guide rails, pedestals, chain, covers, kiosks etc. are required, a phone call to the Pump Technology Team will almost certainly provide a fast solution. Their pumping station experts will work through the challenge with each customer to provide them with a viable and economical solution.

If a new pumping station is required the PumpMatic range offers a comprehensive selection of tank sizes and pump manufactures makes, models and designs. These

can be vortex impeller, cutter or even explosion proof. This means it is possible to configure a pump station for almost all site requirements.

In the company's manufacturing facility they can customize pump stations to suit, depth, position of inlet or inlets, covers for pedestrian or carriageways etc. and can match these with control panels, telemetry monitoring and other essential add-ons.

The PumpMatic range is suitable for stormwater, drainage and sewage and can be sized for household or commercial properties. Steve Murphy, the company's in-house consultant, will ensure the pump station design conforms to the required standards and is accurately sized to provide the specified storage volume.

Since Pump Technology Ltd. is both the pump station manufacture and the pump supplier this ensures the project is completed smoothly guaranteeing accurate specification, build quality and on time delivery. All Products are supplied with detailed offloading and installation details.
