

Pumping stations to suit all applications

For garden rooms, house extensions, one or multiple houses, or commercial premises, Pump Technology Ltd's dedicated pumping station team are on hand to help customers select exactly the right product and specification.

This is possible because they hold a comprehensive range of stock tanks for small pumping stations, as well as the larger PumpMatic pumping station range, which can be customised to suit each site layout.

The larger tanks are manufactured by Pump Technology Ltd group company Pegasus Pumps Ltd, based near Newark, Nottinghamshire. This allows the company to fully monitor and control quality and ensure on time delivery.

Being one of the UK's leading representatives for manufactures such as Jung Pumpen, KSB, ABS, Lowara, Xylem, Saniflo and many more gives the team the flexibility to "package" a pumping station correctly to specification and budget.

Every quotation is followed up by a call to ensure that all the information is clear and meets site needs.

Pump Stations are supplied ready for use with full instructions, internal pipework, non-return valves, isolation valves, covers, control panel and kiosk if required. Inlet or inlets to suit site elevations and waste pipe directions can also be pre-cut at the factory to ensure speedy on-site installation.

Pump Technology Ltd offers a nationwide commissioning and maintenance programme for all its pumping stations.
