SMB BOOSTER SETS SERIES
GENERAL INTRODUCTION – PRODUCT DESCRIPTION

The variable speed SMB booster sets are designed for water transfer and pressurization in the following applications:

- Apartments, single and multi-family houses, condominiums and residential buildings
- Hotels, restaurants, spas
- Various industrial applications

SMB series booster set are variable speed pumping stations with one, two or three **e-SV Smart** series multistage vertical pumps or **e-HM Smart** series multistage horizontal pumps. Each pump is equipped with an e-SM frequency drive that ensures the variable speed operation on all electric pumps.

These types of systems improve the comfort of the end user, reducing noise emissions and also "water hammer", thanks to the gradual switching off of the pumps.

SMB10: The pump is connected to a 5-way fitting by a non-return valve. Control panel is available as accessory.

SMB20, SMB30: The pumps are installed on a single base and connected to each other by means of suction and delivery pipes. The pumps are connected to the manifolds by means of on-off valves and non-return valves.
The control panel is secured to the same base by means of a bracket.

SMB series booster sets with e-SV Smart and e-HM Smart series pumps are certified for use with drinking water.

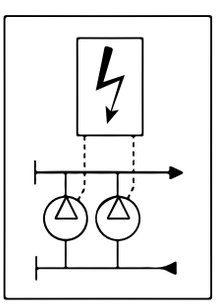

SMB series booster sets are available with a wide range of electric pumps to satisfy the different needs of every system.
SMB booster sets are also available in special versions to fit specific duty points and applications.
Systems for regulating the speed of the electric motors, as in SMB series booster sets, are used in the following cases:

- In case of systems with a lot of users where the daily consumption varies frequently and in different periods.
- When it is necessary to obtain constant pressure.
- In the case of systems with supervision it is possible to monitor and check the performances of the booster sets.

SMB BOOSTER SETS SERIES
DESCRIPTION OF OPERATION

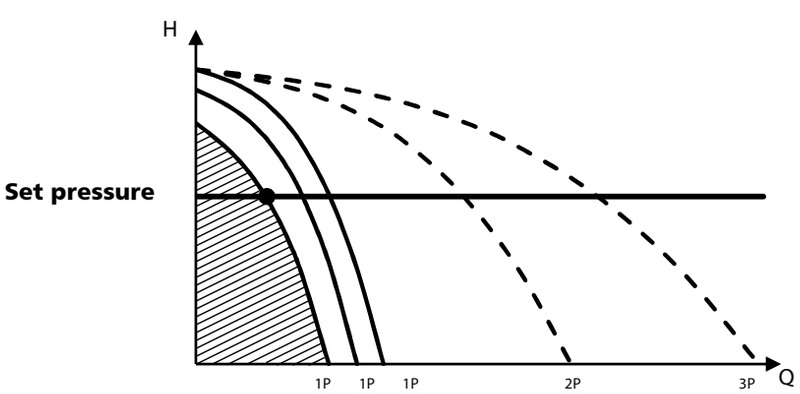

All the electric pumps are controlled by e-SM drive frequency converter and operate at variable speeds.
Start-up is automatic, depending on system requirements. Each electric pump has a pressure transmitter that provides a pressure reading, which is recorded and sent to the frequency converter.
The electric pump speed is modulated based on system requirements.
Electric pump start alternation is automatic, following a preset time (parameter available in the frequency converter).
Electric pump starts and stops are determined based on the pressures entered as set values in the menu of the frequency converter.

Example operation of a set of three electric pumps.

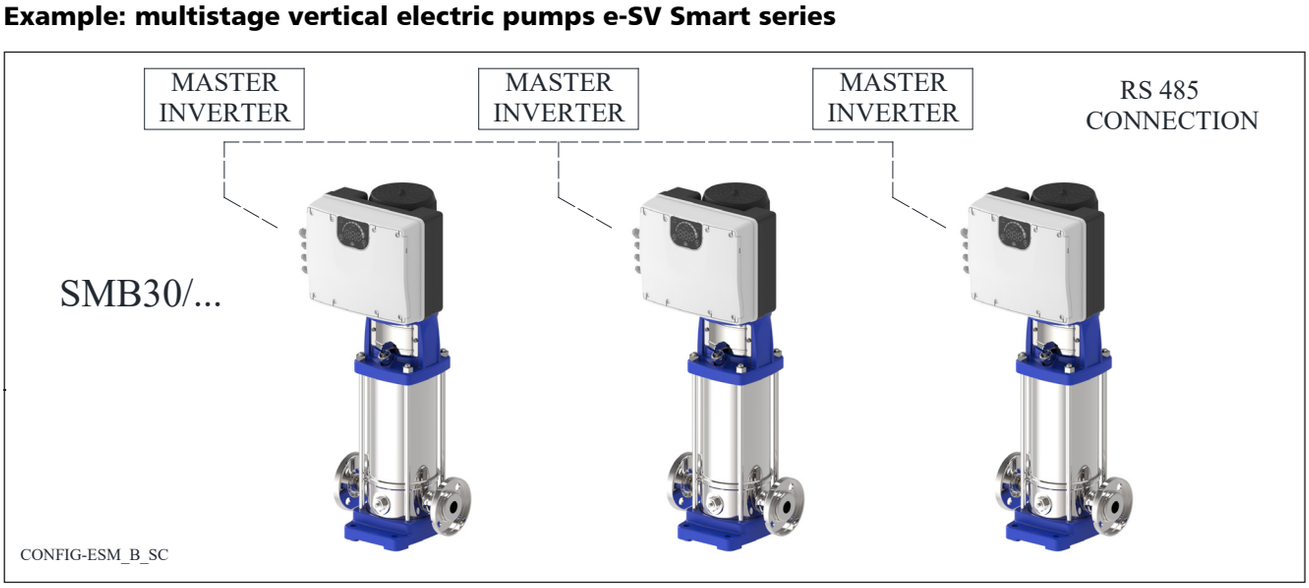

Each electric pump is controlled by a frequency converter. The starting priority is changed in accordance with the time set in the relevant parameter field on frequency converter. The speed adjustment will apply to all the electric pumps installed.
When the water request decreases, the electric pumps stop in succession.
The electric pumps connected to the frequency converter keep the pressure constant by modulating the number of motor revs.
The acceleration and deceleration of the electric pump, both at start-up and switch off, is of the soft type.
This helps to reduce water hammer and ensures a quiet operation of the booster set.

Lowara SMB series booster sets guarantee constant pressure of the system as in the following example:

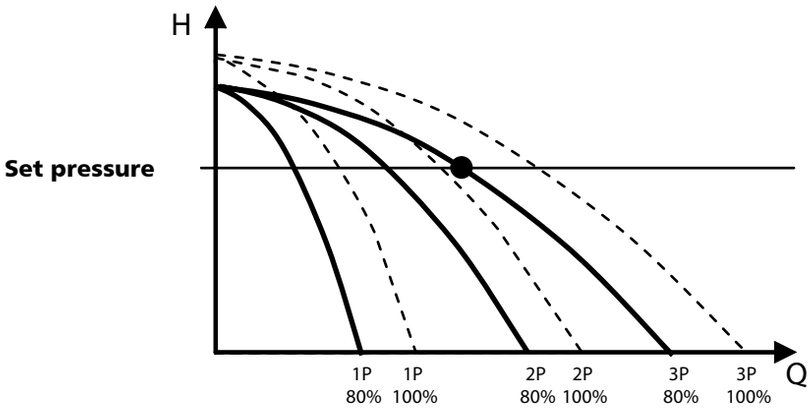

Example: multistage vertical electric pumps e-SV Smart series

SMB BOOSTER SETS SERIES
DESCRIPTION OF OPERATION

When the pressure decreases, an electric pump starts, adjusting the motor speed so that the set pressure value can be guaranteed. When the demand for water increases, the other electric pumps also start in sequence, at variable speed, to keep the pressure at a constant level.

When the demand for water decreases, the electric pumps switch off in succession. The number of revolutions of the first electric pump switched on decreases to a set minimum before switching off.

Regulating the constant pressure value

SMB series booster sets guarantee constant pressure of the system even during frequent variations in water consumption. The system pressure value is measured by the pressure transducers connected to the delivery manifold.
The value found is compared with the set value. The comparison between the measured pressure and the set pressure is performed through the internal "controller" of frequency converter, which manages the motor speed acceleration and deceleration ramps (frequency), changing the performance of the electric pump during the time.
In case of fault of one of the frequency converters, the others will remain active and will continue to guarantee the control of the other electric pumps and the constant pressure.

Type of control

SMB series booster sets use one or more sensors as a standard device to control pressure.
For each booster set, there are as many sensors as the number of electric pumps installed. In case of fault of one of the transducer, the converter connected to the electric pump stops working. It is also possible to change the unit of measure into bar, psi, m^3/h, °C, °F, l/sec, l/min, %. In this case, different transducers may be used, depending on the selected measure, such as flow or temperature transducers.

Cyclical exchange of pumps

In the SMB series, electric pump start is alternated according to a time set for each pump, through a clock in the frequency converter menu.

Additional protection against dry running

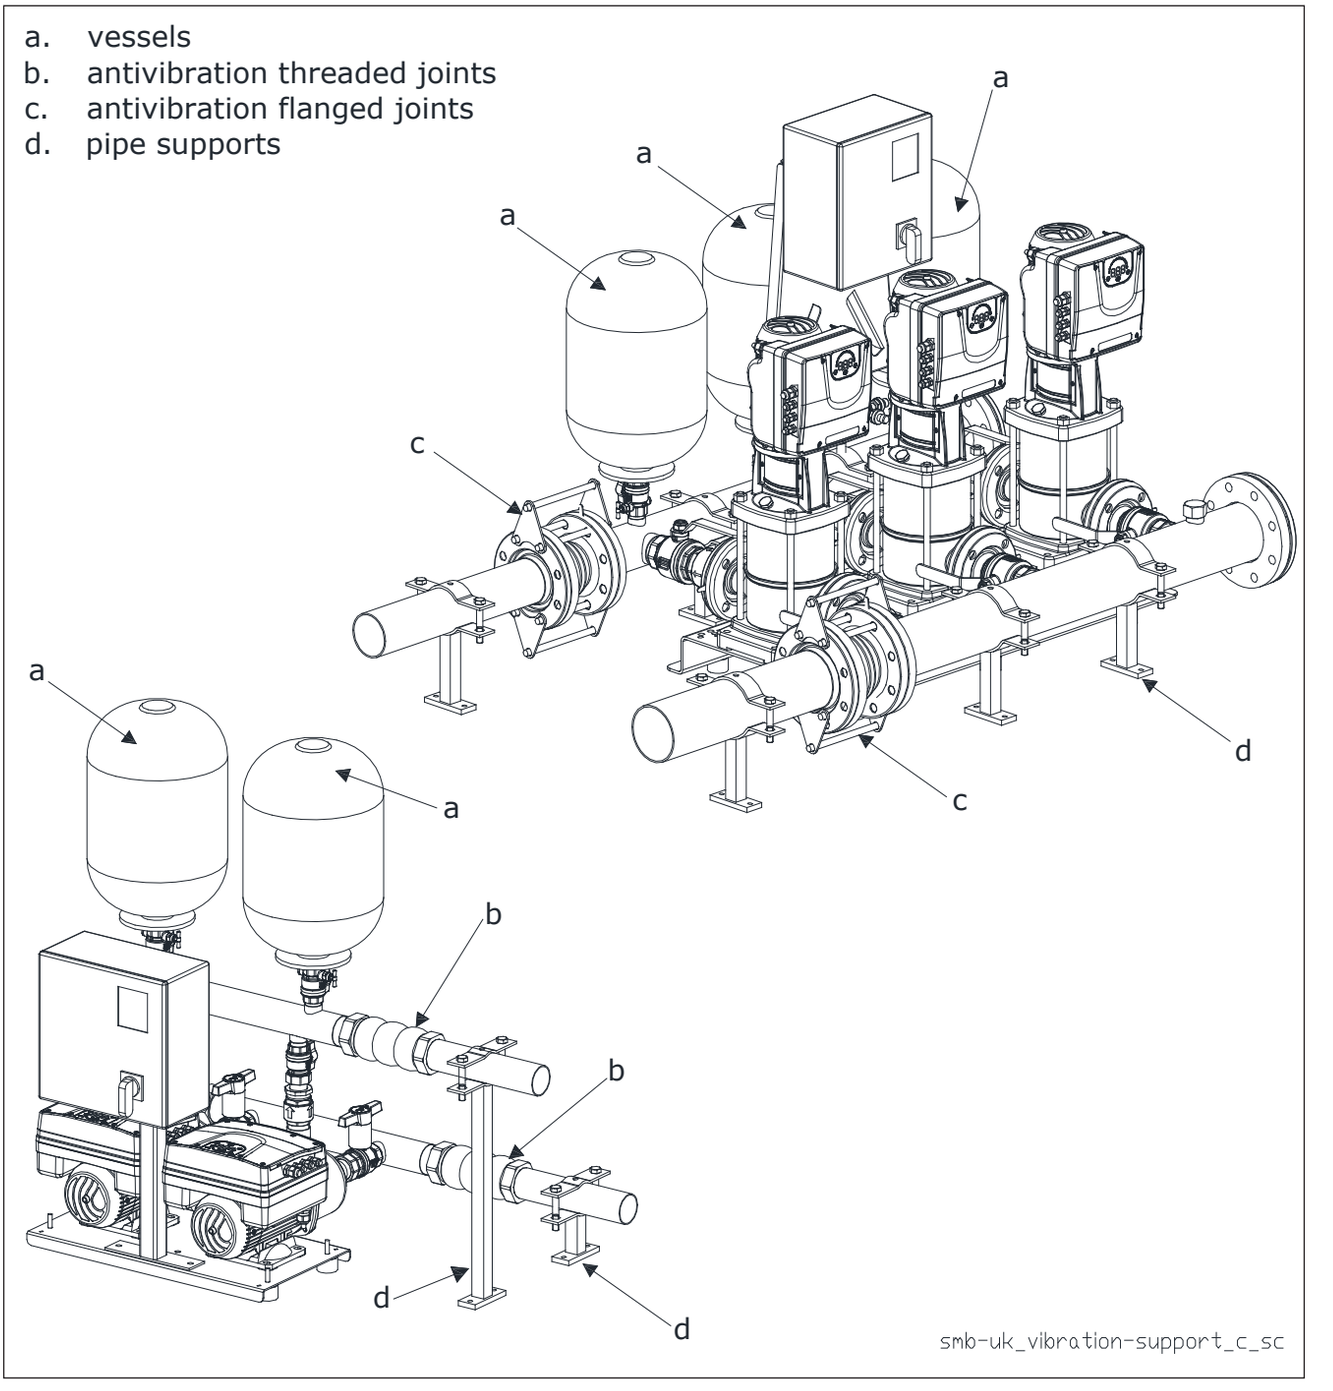

Protection against dry running activates when the water reserve falls below the minimum level guaranteed for suction. The level can be checked using a float switch, a minimum pressure switch, an external contact, or level probes. For the latter, the probes must be connected to the adjustable sensitivity electronic module. The control panel is already preset for the installation of this module.

Minimum delivery pressure protection

The minimum delivery pressure function can be managed by entering the pressure value in the menu of the frequency converter, which will receive the signal through the pressure transducer at the delivery.

SMB BOOSTER SETS SERIES
INSTALLATION

The booster sets must be installed in areas protected against frost and with adequate ventilation to cool the motors. It is a good practice to connect the booster set to the suction and delivery pipes of the system inserting vibration-damping joints to limit the transmission of vibrations and resonance to the system.

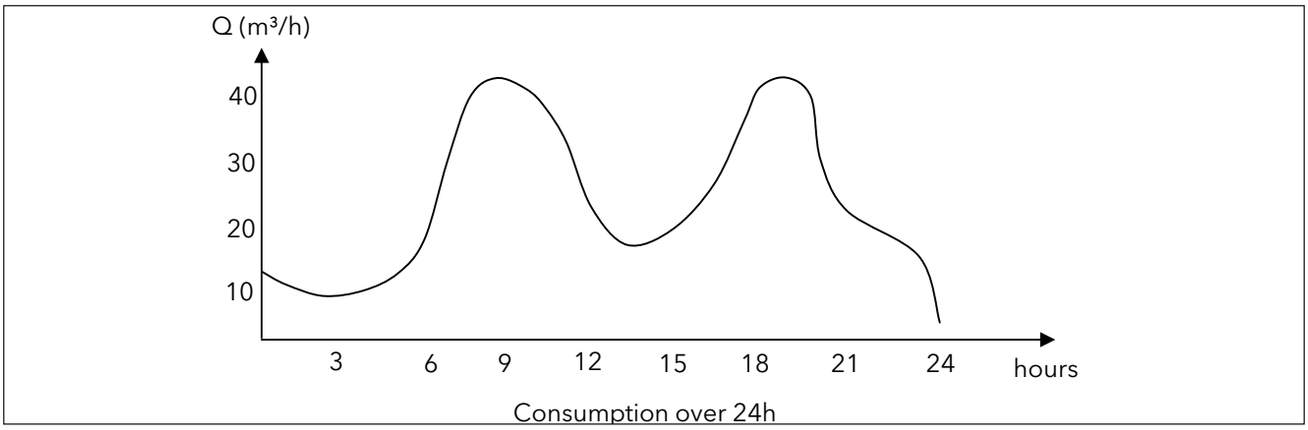

The booster set is connected to pressurised tanks.
These tanks can avoid any problems due to water hammer that is created due to the sudden stopping of the electric pumps running at a fixed speed. For this type of system, diaphragm expansion vessel (hydro tube) are installed in the delivery piping for perform a pressure dampening function.
Due to their design, variable-speed booster sets can satisfy users' demands by moderating the electric pump speed. Considering also that variable-pressure sets are very sensitive to swings of pressure in the system, the use of vessels allows the pressure to stabilise when requests are low or inexistent, and avoids the electric pumps remaining in operation at minimum speed without stopping.

SMB BOOSTER SETS SERIES
CHOICE AND SELECTION

The following conditions should be considered when choosing a booster set:

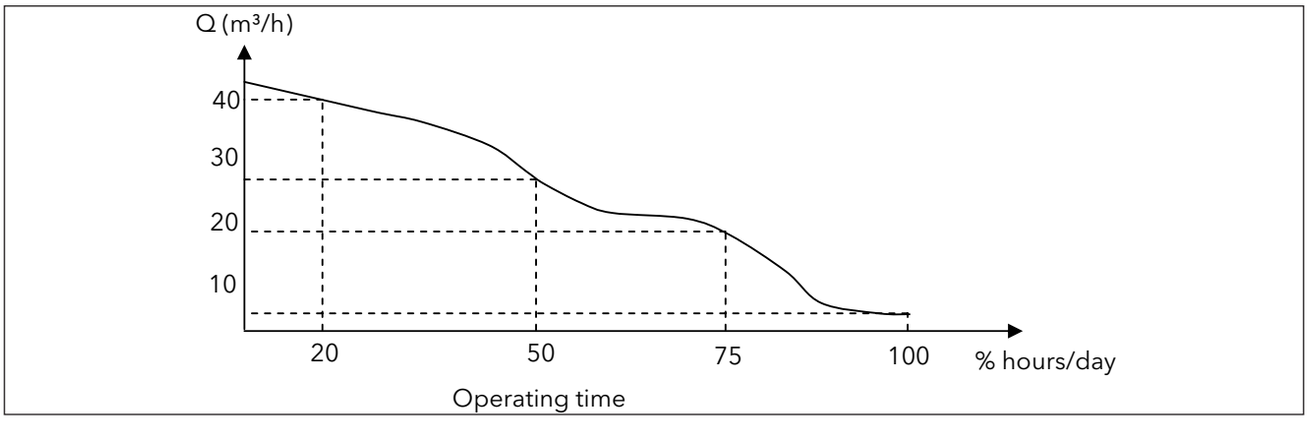

- The system's flow rate and pressure requirements should be met.
- The unit must not be oversized, avoiding unnecessary installation and running costs.

Generally water distribution systems such as those for domestic water supply or for large agglomerates such as hospitals, hotels or similar, have "variable" water consumption i.e. in a 24-hour period there may be sudden variations in consumption that are difficult to foresee. A pattern of consumption may occur in 24 hours, but the daily percentage of unit operation may also occur at various flow rates.
Generally the definition of flow rate for these types of systems is based on either the "probability calculation" which is a very complex system of calculation, or based on tables or diagrams in the national standards which provide guidelines for the sizing of the systems and therefore for calculating the maximum simultaneous flow rate.

Consumption over 24h

The operating time of the unit still calculated over 24h, gives us a view of the daily percentage of operation at the various flow rates.
This means that there may be daily peaks where the maximum flow rate requested is concentrated in a short space of time. In the example given below, it can be seen that in 100% of the time there is a consumption of 4 m³/h, while in 20% of the operating time there is a consumption of 40 m³/h.

Operating time

When selecting the booster set the consumption figure of the system must be considered, which is generally supplied by the person who designed the system. For systems where consumption varies continuously and suddenly over time it is advisable to install SMB series booster sets with variable regulation of the electric pump speed.
The calculation of the size of the booster set (its performance and the number of electric pumps) is based on the take-off point and therefore on the consumption value which takes the following factors into account:

- The value of the peak in consumption
- Efficiency
- NPSH
- Standby pumps
- Diaphragm tanks

SMB BOOSTER SETS SERIES
CHOICE AND SELECTION

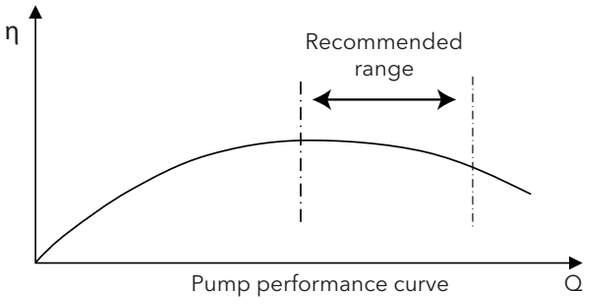

By adjusting their operation over time, variable-speed booster sets give the end user energy savings which can be calculated directly on the control board with a metering module fitted in the electric control panel.
This allows checking of the system yield, especially in complex systems with many users and many ranges of consumption.
It is possible to install a standby electric pump if it is necessary to have some kind of additional safety in the pump station.
This is typical in systems of a certain importance, such as hospitals or factories, or in the field of crop irrigation.

SMB series booster sets must also be equipped with expansion vessels (for the size of the vessels, see the specific chapter in this catalogue).
A single vessel or several smaller vessels can be installed on the delivery of the booster set, always taking the total capacity into account.
Expansion vessels avoid the risk of water hammer, which is harmful for both the system and the electric pumps.

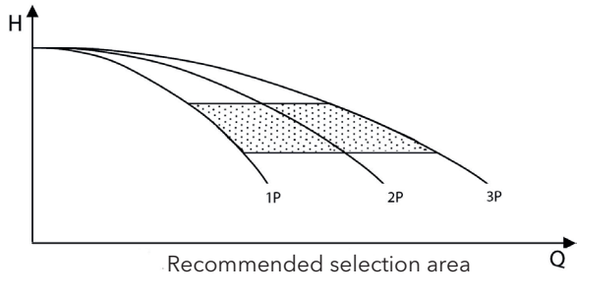

Generally for systems with highly variable or sudden variations in consumption, it is recommended to install a booster set with variable electric pump speed, such as the SMB series, to guarantee constant pressure.

What type of electric pump to choose?
Generally, the selection of electric pump is based on the maximum duty point of the system, which is usually the highest possible. The maximum request value is normally for short periods, so the electric pump must also be able to satisfy variable requests throughout its time in service.Generally the choice of the electric pump, based on the performance curve, should fall around the maximum efficiency point. The pump must ensure operation
within its rated performance.

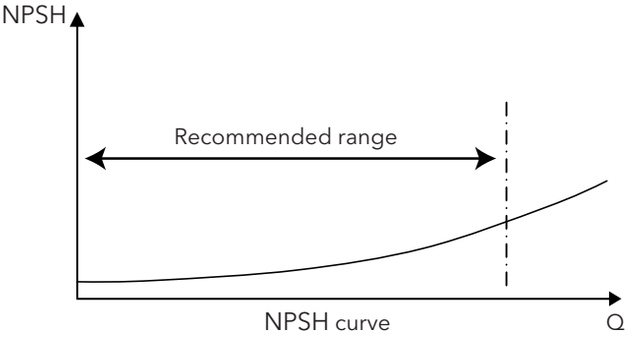

Since the unit is sized according to the maximum possible consumption, the maximum duty point of the electric pumps must be in the area on the right of the performance curve so that, if there is a fall in consumption, the efficiency remains high.

If we make a choice on the characteristic curve of the electric pump, we can see that the optimum working area where the booster works is represented by the following graph:

Another factor to be considered when choosing the electric pumps is its NPSH value. Never choose a electric pump where the maximum duty point is too far to the right of the NPSH curve.
This risks not having good electric pump suction, which may be aggravated by the type of installation (where negative suction is possible).
In these cases there is the risk of cavitation.
The NPSH of the electric pump must always be checked at the maximum flow rate requested.

LOWARA
a xylem brand

SMB BOOSTER SETS SERIES
HOW TO READ BOOSTER SETS WITH e-SM DRIVE CURVES

To exploit to the maximum potential of SMB BOOSTER SETS it's important to properly read working curves shown in the relevant charts.

① **Booster set model**: for booster single pump unit, SMB10, refer to name of pump. Example: 1SVE05..003

② **Maximum speed curve**

③ **Minimum speed curve**: it refers to the minimum rpm level the motor can work at, it's calculated depending on the model of pump maximizing for each one the working area and allowing the highest system flexibility.

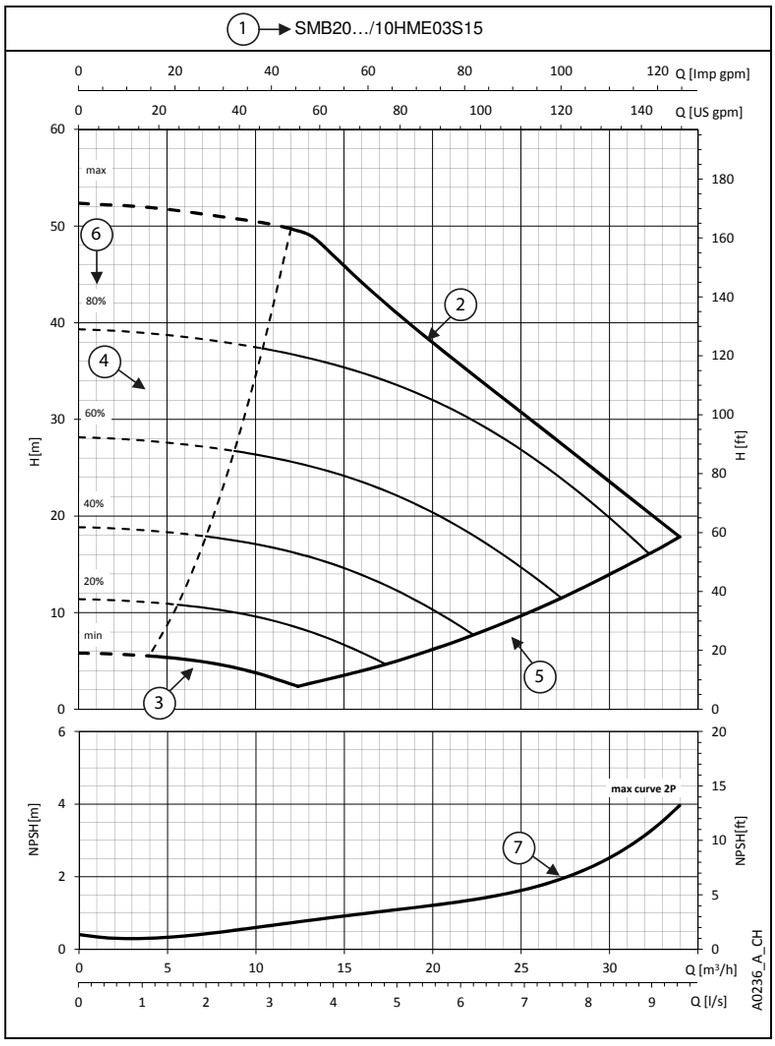

④ The **area with dotted lines** is where he pump could only operate intermittently for short periods of time.

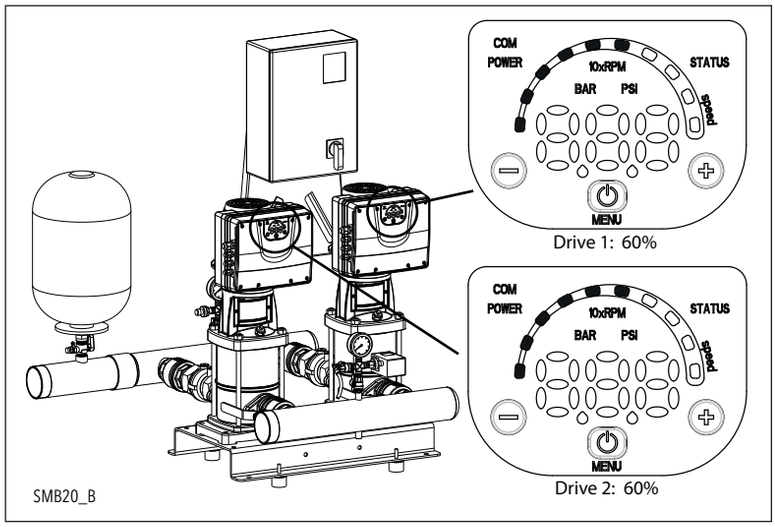

⑤ Each **intermediate curve** between max and min speed shows the percentage of load the system is working at **synchronous** mode (all pumps work at the same speed); it's easy to read also from the LED speed bar on the HMI keypad: at 90% there will be 9 led, at 80% there will be 8 and so on.
Example: at 60% there will be 6 lit led's as in figure.

⑥ The **part load percentage** is calculated depending on maximum speed (max, 100%) and minimum speed (min, equal to 0%, which is the minimum part load step, below it the drive stays powered up but cannot work).

⑦ **NPSH**: is the net positive suction head of booster set with all pumps working at synchronous mode and at the maximum speed.

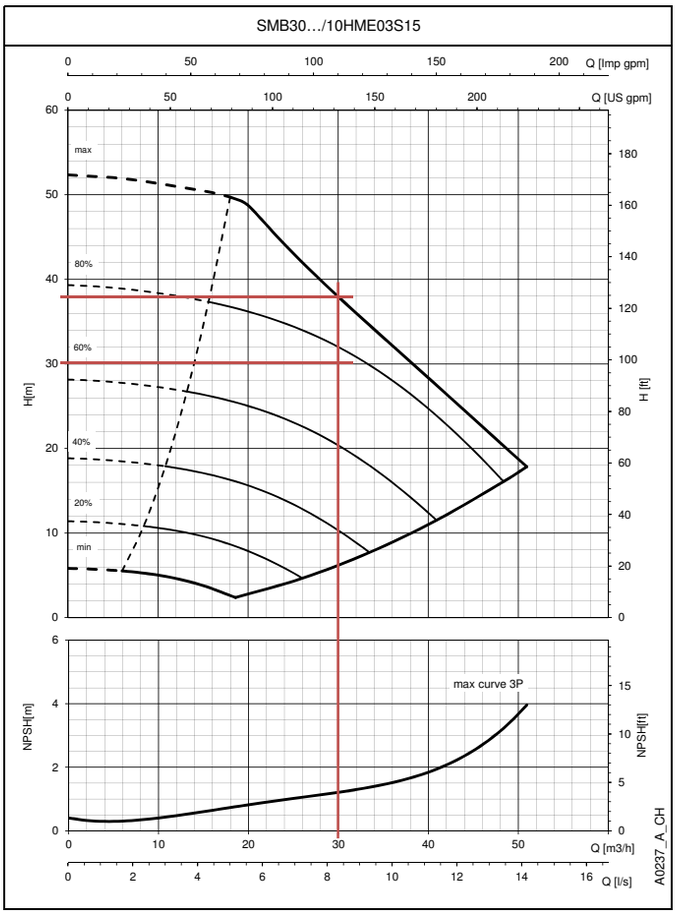

Load control: the booster set SMB series controls and limits power consumption at high flow/low head, in this way the motor stays protected from overload and ensure a longer life of pump+motor+drive system.

SMB BOOSTER SETS SERIES
SELECTING THE PUMPS

The choice of electric pump is therefore based on the characteristic curve of the electric pump depending on the flow rate and the pressure required for the system. Starting from the required flow rate, a vertical line is drawn until it meets the horizontal line of the required pressure. The point of intersection of the lines gives both the type and the number of electric pumps necessary for the system.

The example alongside refers to a required flow rate of 30 m^3/h and a pressure of 30 m water column

As shown in the operating curves on page 119, the selection requires three 10HME03S electric pumps.

Moreover the take-off point falls in the npsh area farthest to the left and therefore in an area with a low cavitation risk.

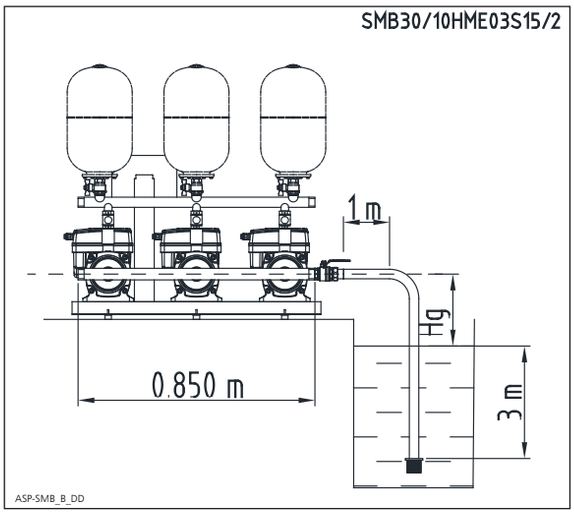

The values obtained are those for the performance of the pumps. A correct check of the net pressure value must be made due to the intrinsic load loss of the booster set and the conditions of installation.
For this reason it is recommended to see the specific chapter in this catalogue.

NPSH

The minimum operating values that can be reached by the pump suction are limited by the appearance of cavitation. Cavitation consists in the formation of steam pockets in the liquid when the local pressure reaches a critical value. A critical value is when the local pressure is equal or just below the pressure of the liquid steam.
Steam cavitation flows with the current. When it reaches a higher pressure area, condensation of the contained steam occurs. The pockets collide, causing pressure waves that are transmitted to the walls, which are therefore subjected to stress cycles that can cause deformation and then breaks due to fatigue. This phenomena, characterised by a metallic noise due to the hammering of the walls, is called incipient cavitation. Cavitation damage can be made worse by electrochemical corrosion, and by local temperature increases due to the plastic deformation of the walls.
The materials with the highest resistance to heat and corrosion are alloyed steels, and particularly austenitic steels.
The conditions that cause cavitation can be predicted by calculating the total suction height, indicated in the technical literature with the acronym NPSH (Net Positive Suction Head).
The NPSH represents the total energy (in m) of the flow measured at the suction in incipient cavitation conditions, net of the steam pressure (in m) of the fluid at the input of the pump.

SMB BOOSTER SETS SERIES
SUCTION CONDITIONS

Once the type and the number of electric pumps of the set have been identified, the suction conditions must also be assessment. Below is an example of the assessment of the suction lift installation conditions, in relation to the previously described case: in suction lift installation, it is necessary to calculate the maximum Hg height which must not be exceeded due to safety reasons, to avoid cavitation, and therefore the unpriming of the pump itself.

The relation that must assessed, and which connects this value, is the following:

NPSH $_{available}$ ≥ NPSH $_{required}$, when the equality condition represents the limit condition.

NPSH $_{available}$ = Patm + Hg – ∑t – ∑a

Where:
Patm is the atmospheric pressure, equal to 10,33 m
Hg is the geodetic level difference
∑t are the pressure drops for suction components such as foot check valve, suction piping, curve, gate valve.
∑a are the pressure drops for suction set branch.

NPSH $_{requested}$ is a parameter obtained from the performance curve; in our case, at the flow of each pump equal to 10 m³/h, it corresponds to 1,2 m (page 119). Before calculating the NPSH $_{available}$, it is necessary to calculate the pressure drops at the suction, using the tables on page 135-136, and taking into account the material, such as the type of stainless steel for the piping and cast iron for the valves.
The total sum of the pressure drops ∑t for suction components is made in the following way, considering that the diameter of the suction piping is DN65, equal to the diameter of the suction manifold of the set (page 63/68).

Calculation of suction drops ∑c for cast iron components
Equivalent piping length for DN65 foot check valve = 3 m
Equivalent piping length for DN65 gate valve = 0,2 m
Total equivalent length = 3 + 0,2 = 3,2 m
Pressure drops in the suction piping (cast iron) ∑c = 3,2 x 17,6 /100 = 0,56 m

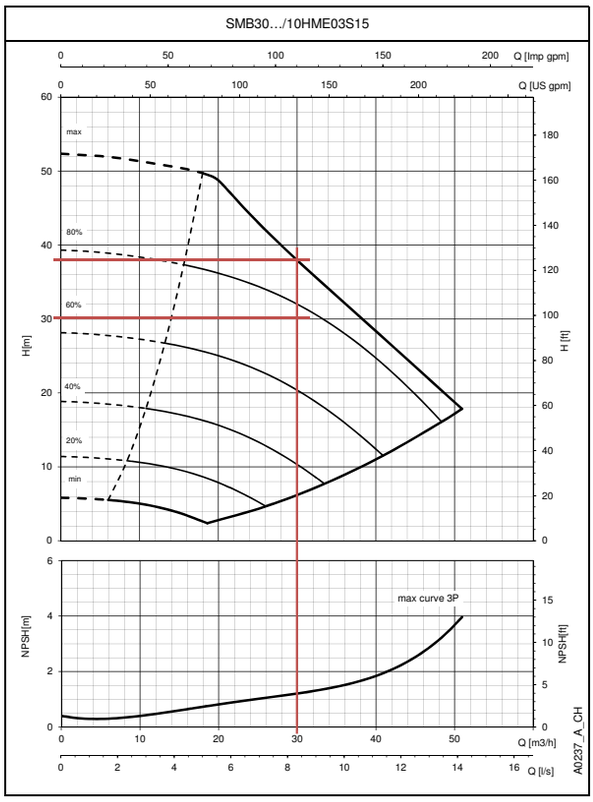

Calculation of suction drops ∑s for stainless steel components
Equivalent piping length for DN65 90° curve = 1,3 m
Total equivalent length = 1,3 m
Horizontal suction pipe length = 1 m
Vertical suction pipe length = 3 m
Pressure drops in the suction piping (stainless steel) ∑s = (1,3 + 1 + 3) x 17,6 x 0,54 / 100 = 0,50 m

Pressure drops for suction components ∑t = ∑c + ∑s = 0,56 + 0,50 = 1,06 m
The total sum of the pressure drops ∑a for suction components is made in the following way, considering that the diameter of the suction piping is DN65, equal to the diameter of the suction manifold of the set (page 63/68).
Hc pressure drops for suction set branch must be assessed on the B curve (page 125, scheme A0536_A_CH); at the flow value of each pump equal to 10 m³/h, a value of Hc = 0,0035 m is obtained
Calculation of suction drops ∑s for stainless steel components
Equivalent piping length for DN65 manifold T fitting = 2,6 m
Suction manifold length = 0,85 m
Pressure drops in the suction manifold (steel) ∑s = (2,6 + 0,85) x 17,6 x 0,54 / 100 = 0,327 m
Pressure drops ∑a = Hc + ∑s = 0,0035 + 0,327 = 0,331 m

Remembering that NPSH $_{available}$ = Patm + Hg - ∑t – ∑a and that NPSH $_{available}$ ≥ NPSH $_{requested}$ we have that
Patm + Hg - ∑t - ∑a must be ≥ NPSH $_{requested}$.
Substituting the values we get that 10,33 + Hg - 1,06 - 0,331 ≥ 1,2 m (NPSH $_{requested}$),
Hg = 1,2 + 1,06 + 0,331 - 10,33 = - 7,74 m, it represents the limit condition for which
NPSH $_{available}$ = NPSH $_{requested}$

Therefore, in order to guarantee the conditions for the correct operation of the system as far as cavitation risks, it will be necessary to position the pump above the water level, **so that the Hg height is below the limit value of 7,74 m**.

SMB BOOSTER SETS SERIES
NET PRESSURE CALCULATION

When selecting SMB booster sets, the performance levels of the pump must be taken into account.
Performance levels are obtained from the characteristic curves of the pumps, and do not take into account any pressure drops due to system piping and valves.
The following example helps the customer to obtain the **correct delivery manifold pressure value**:
by knowing the system operating point Q = 30 m³/h and H = 30 mH_2O (P requested),and the installation height Hg (estimated to 3 m), in order to make the calculations easier we use the pressure drop curves for each single pump on page 119 of this catalogue.
Assuming that a booster set SMB30/10HME03S with non-return valves on the delivery has been selected, we proceed as follows:

P net available ≥ P requested, when the equality condition represents the limit condition.

P net available = H – (Hg + ∑t + ∑a + ∑m)

Where:
H head value of booster set
Hg is the geodetic level difference (estimated to 3 m)
∑t are the pressure drops for suction components such as foot check valve, suction piping, curve and gate valve.
∑a are the pressure drops for suction set branch
∑m are the pressure drops for delivery set branch

The total sum of the pressure drops for suction components ∑t = ∑c + ∑s = 0,56 + 0,50 = 1,06 m
The total sum of the pressure drops ∑t for suction components is made in the following way, considering that the diameter of the suction piping is DN65, equal to the diameter of the suction manifold of the set (page 63/68).
Hc pressure drops for suction set branch must be assessed on the B curve (page 125, scheme A0536_A_CH); at the flow value of each pump equal to 10 m³/h, a value of Hc = 0,0035 m is obtained.

Calculation of suction drops ∑s for stainless steel components
Equivalent piping length for DN65 manifold TEE fitting = 2,6 m
Suction manifold length = 0,85
Pressure drops in the suction piping (stainless steel) ∑s = (2,6 + 0,85) x 17,6 x 0,54 / 100 = 0,327 m
The total pressure drops ∑a for suction components are:
∑a = Hc + ∑s= 0,0035 + 0,327 = 0,33 m

The total sum of the pressure drops ∑m for delivery branch is made in the following way, considering that the diameter of the delivery manifold is DN65, equal to the diameter of the delivery manifold of the set (page 63/68).
Hc pressure drops for delivery set branch must be assessed on the A curve (page 125, scheme A0536_A_CH); at the flow value of each pump equal to 10 m³/h, a value of Hc = 1,8 m is obtained

Calculation of delivery drops ∑s for stainless steel components
Equivalent piping length for DN65 manifold TEE fitting = 2,6 m
Delivery manifold length = 0,85 m
Pressure drops in the delivery manifold (steel) ∑s = (2,6 + 0,85) x 17,6 x 0,54 / 100 = 0,327 m

Pressure drops in delivery manifold ∑m = Hc + ∑s = 1,8 + 0,327 = 2,12 m
If we analyse the performance of the set at the flow value of 30 m³/h, the head value H is 38 m.
The net pressure at the delivery manifold will be P net available= H – (Hg + ∑t + ∑a + ∑m)
Substituting the values we get that P net available = 38 – (3 + 1,06 + 0,33 + 2,12) = 31,5
When comparing this value with the design value (not taking into account the dynamic energy)
we see that 31,5 m > 30 m [P net available > P Required]

The set is therefore capable of meeting system requirements.

VERSIONS AVAILABLE

A304 Main components in contact with the liquid in AISI 304 stainless steel or higher. Galvanised screws and bolts. Flanges not in contact with the liquid galvanised.

B304 Main components in contact with the liquid in AISI 304 stainless steel or higher. Screws and bolts in AISI 304 stainless steel or higher. Flanges not in contact with the liquid in AISI 304 stainless steel.

C304 Main components in contact with the liquid in AISI 304 stainless steel or higher. Base, brackets, supports, screws and bolts in AISI 304 stainless steel or higher. Flanges not in contact with the liquid in AISI 304 stainless steel or higher. Valves fully made of AISI 304 stainless steel or higher (body, heads, disc).

A316 Main components in contact with the liquid in AISI 316 stainless steel or higher. Galvanised screws and bolts. Flanges not in contact with the liquid galvanised. *

B316 Main components in contact with the liquid in AISI 316 stainless steel. Screws and bolts in AISI 316 stainless steel. Flanges not in contact with the liquid in AISI 316 stainless steel. *

C316 Main components in contact with the liquid in AISI 316 stainless steel. Base, brackets, supports, screws and bolts in AISI 316 stainless steel. Flanges not in contact with the liquid in AISI 316 stainless steel. Valves fully made of AISI 316 stainless steel (body, heads, disc). *

* Vessel in AISI 304 only.

OPTIONS

3A Set with 1A certified pumps (Factory test report issued from end of line, QH curve included).

3B Set with 1B certified pumps (Test bulletin issued by Sala Audit (Audit Room); it includes QH curve, output and power).

BAP High pressure pressure switch on the delivery side. **

DR1 Set with 1 optical sensor for lack/presence of water, installed on the suction side.

PA Minimum pressure pressure switch on the suction side, for protection against dry running. **

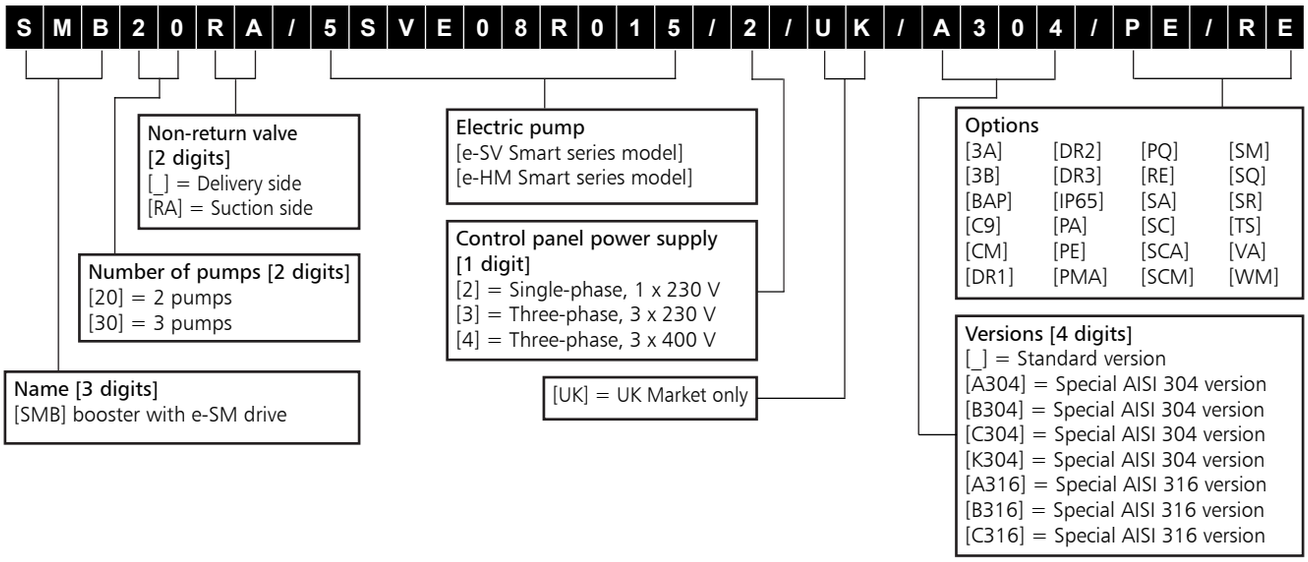

PMA Minimum pressure pressure switch and vacuum pressure gauge for protection against dry running, installed on the suction side. **

PQ Set for aqueduct installation (with pressure gauge/ pressure switches/transmitters oversized by one size).

SR Without non-return valve.

** These options are not feasible concurrently in the same unit.

OPTIONS

3A Set with 1A certified pumps (Factory test report issued from end of line, QH curve included).
3B Set with 1B certified pumps (Test bulletin issued by Sala Audit (Audit Room); it includes QH curve, output and power).
BAP High pressure pressure switch on the delivery manifold.
C9 Delivery manifold turned by 90°, curves. It is not possible to install expansion vessels directly on the manifold.
CM Suction or delivery manifold larger than standard size.
DR1 Set with 1 optical sensor for lack/presence of water, installed on the suction manifold.
DR2 Set with 2 optical sensors for lack/presence of water (fixed to each pump).
DR3 Set with 3 optical sensors for lack/presence of water (fixed to each pump).
IP65 IP65 protection degree control panel.
PA Minimum pressure pressure switch on the suction manifold, for protection against dry running.
PE Control panel with emergency button.
PMA Minimum pressure pressure switch and vacuum pressure gauge for protection against dry running, installed on the suction manifold.
PQ Set for aqueduct installation (with pressure gauge/ pressure switches/transmitters oversized by one size).
RE Control panel with condensation resistance, controlled by a thermostat.
SA Without suction: without suction valves and without suction manifold.
SC Set without control devices such as pressure switches and transmitters; with pressure gauge.
SCA Without suction manifold (but with suction valves).
SCM Without delivery manifold (without pressure switches, transmitters and pressure gauge; with deliveryvalves).
SM Without delivery: without delivery valves and without delivery manifold.
SQ Booster set without control panel and bracket; with pressure transmitters and e-SM drive.
SR Without non-return valve.
TS Set with electric pumps with special seals.
VA Control panel with digital voltmeter and ammeter.
WM Wall mounted control panel; cables L=5m.

SMB BOOSTER SETS SERIES
RANGE

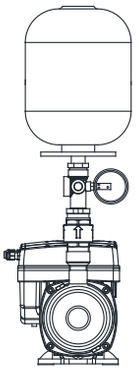

The standard range of SMB series variable-speed booster sets includes models with 1, 2 and 3 electric pumps in different configurations, to adapt to the specific needs of each application.

Specifications:

- Single-phase and three-phase power supply, variable speed and control by pressure transducers and e-SM frequency converter drives, integrated with permanent magnets motors.

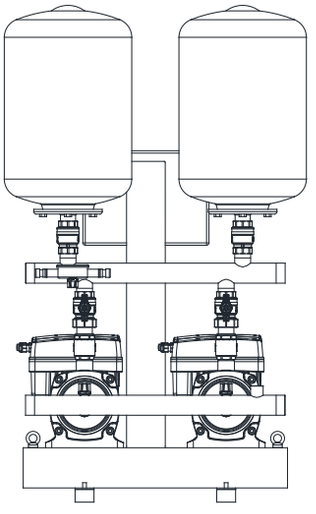

SMB10 SERIES

- One electric pump e-SVE, e-HME series.
- **Head** up to 158 m.
- **Flow rate** up to 30 m^3/h.

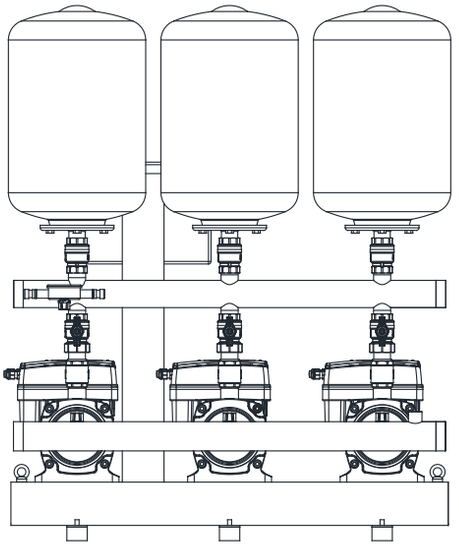

SMB20 SERIES

- Two electric pumps e-SVE, e-HME series.
- **Head** up to 158 m.
- **Flow rate** up to 60 m^3/h.

SMB30 SERIES

- Three electric pumps e-SVE, e-HME series.
- **Head** up to 158 m.
- **Flow rate** up to 90 m^3/h.

e-SM DRIVE
GENERAL DESCRIPTION

Background and context

In every sector, from construction and industry to agriculture and building services the need for intelligent, compact and high-efficiency pumping systems is constantly growing.
That's why Lowara has developed the **e-SM drive**: an integrated intelligent pumping system with electronically driven, permanent magnet motor (IE5 efficiency level).
The integrated control system, combined with the high performance, power and efficiency from the motor and hydraulics, guarantees impressively low operating costs. You also benefit from flexibility, precision and its ultra-compact size.

Savings

The electronics and permanent magnet motor are highly efficient and minimize power losses while transferring maximum energy to the hydraulic parts of the pump.
The refined control system with integrated microprocessor adjusts the motor speed, matching the required operating point of the pump or system requirements.
This reduces demand on electricity according to the required working conditions.
This creates economies, especially in systems where pump demand varies over time.

Flexibility

The compact size, low loss and increased control make the e-SM drive a good choice in applications and systems where fixed speed pumps are commonly used. It is easy to integrate in control and regulation loops thanks to the wide availability of compatible communication protocols, including analog and digital inputs.
The pump is supplied with a pressure sensor.

Ease of use and commissioning

e-SM drive has an intuitive interface that guides the user through the installation, and an easily accessible area for connections.
The control system is integrated and no additional external electrical panel is required.

Application sectors

- Water supply systems in residential buildings
- Air conditioning
- Water treatment plants
- Industrial installations

e-SM System

- Single-phase power supply: 220-240V, 50/60 Hz
- Three-phase power supply:
  – from 0,37kW to 1,5kW: 220-240V/380-415V 50/60 Hz
  – 2,2kW: 400V +/- 10%, 50/60 Hz
- Power up to 1,5kW for single-phase version
- Power up to 2,2kW for three-phase version
- Protection class IP55
- Can be linked up to 3 pumps

Motor

- IE5 efficiency level (IEC TS 60034-30-2:2016)
- Synchronous electric motor with permanent magnets, (TEFC), closed structure, air-cooled
- Insulation class 155 (F)
- Overload protection and locked rotor with automatic reset incorporated

Optional components:

Sensors

The following sensors are available for electric pump equipped with e-SM drive:

- Pressure-transducer
- Level-sensor.

PUMPS WITH e-SM DRIVE
GENERAL DESCRIPTION

e-SV Smart (e-SVE)

Pump

- **Flow rate**: up to 30 m³/h
- **Head**: up to 136 m
- Ambient temperature: from -20°C to +50°C without performance penalty
- Temperature of pumped liquid up to +120°C for single-phase motor versions
- Maximum operating **pressure**:
  - 1, 3, 5, 10, 15, 22SV with oval flanges: 16 bar (PN16) at 50°C.
  - 1, 3, 5, 10, 15, 22SV with round flanges or Victaulic®, Clamp,o DIN 11851 connections: 25 bar (PN 25) a 50°C.
- Vertical multistage centrifugal pump. All metal parts in contact with the pumped liquid are made of stainless steel.
- **F**: round flanges, in-line delivery and suction ports, AISI 304.
- **R**: round flanges, delivery port above the suction port, with four adjustable positions, AISI 304.
- Further choice possibilities among the following versions:
  - **T**: oval flanges, in-line delivery and suction ports, AISI 304.
  - **N**: round flanges, in-line delivery and suction ports, AISI 316.
- Reduced axial thrusts enable the use of **standard motors** that are easily found in the market.
- Mechanical seal according to EN 12756 (ex DIN 24960) and ISO 3069 for 1, 3, 5SV and 10, 15, 22SV (≤ of 4 kW) series.
- **Balanced mechanical seal** according to EN 12756 (ex DIN 24960) and ISO 3069, which **can be replaced without removing the motor from the pump** for 10, 15 and 22SV (≥ of 5,5 kW) series.
- Seal housing chamber designed to prevent the accumulation of air in the critical area next to the mechanical seal.
- A second plug is available for 10, 15, 22SV series.
- Easy maintenance. No special tools required for assembly or disassembly.
- The hydraulic performances meet the tolerances specified in ISO 9906:2012.

---

e-HM Smart (e-HME)

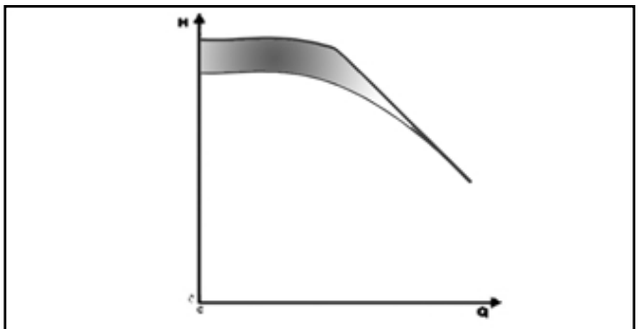

Pump

- **Flow rate**: up to 29 m³/h
- **Head**: up to 158 m
- Ambient temperature: from -20°C to +50°C without performance penalty
- Temperature of pumped liquid up to +120°C for single-phase motor versions
- Maximum operating **pressure**: 16 bar (PN 16)
- Connections: Rp threaded for both suction and discharge manifold
- The hydraulic performances meet the tolerances specified in ISO 9906:2012.

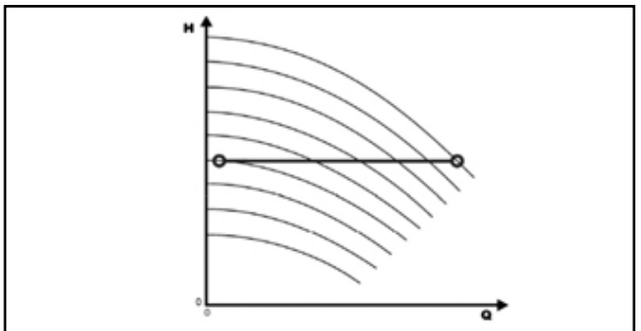

e-SM DRIVE SERIES

Integrated intelligence: The electronic control of the motor enables a 20% increase in performance compared to an equivalent fixed speed pump
(area highlighted in figure "Integrated intelligence").

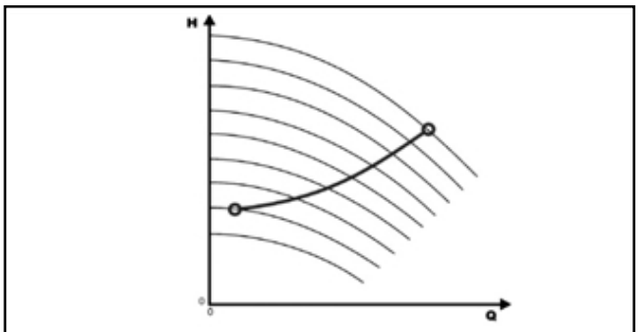

Integrated intelligence

Adjustment: This is possible both at constant pressure and according to the characteristic curve of the system, based on the customer's preferences. Another option is according to an external signal or at a preset speed.

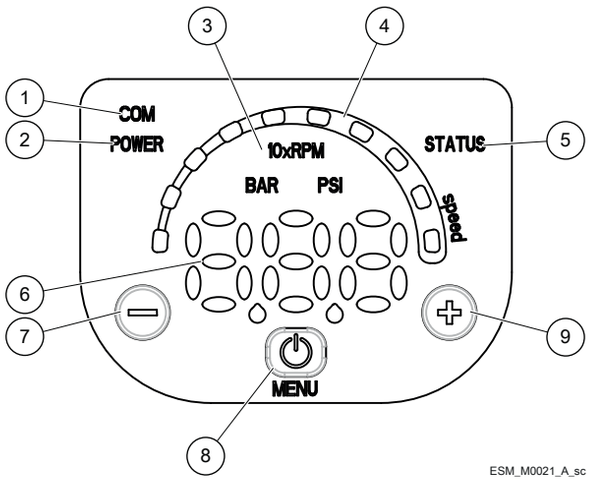

Control for constant pressure

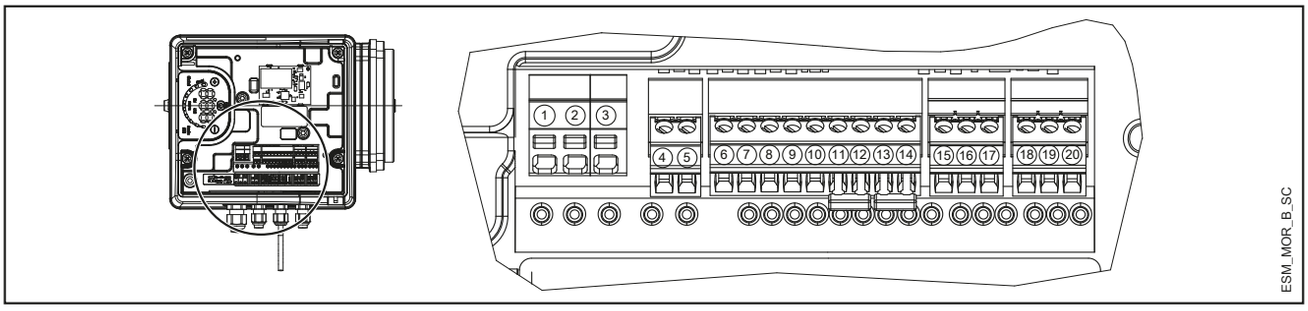

Control to match a system curve

Intuitive and simple interface: You can control the unit from just three buttons, with an easy to read display for parameters and alarms, designed for complete control of system operation.

SMB20, SMB30 BOOSTER SETS SERIES CONTROL PANEL

Control and protection panel for electric pumps with integrated frequency converters:

- power supply **single-phase 1x230 V** +/-10%, 50/60Hz (SMB.../2)

- power supply **three-phase 3x400 V** +/-10%, 50/60Hz (SMB.../4)

- power supply **three-phase 3x230 V** +/-10%, 50/60Hz (SMB.../3)

IP55 protection.
Metal for sets with two and three pumps.
The IP65 degree is optional (SMB.../IP65)

Main characteristics:
- Automatic switch with thermal magnetic protection for each e-SM drive frequency converter.
- Protection against dry running.
  Protection against dry running activates when the water reserve falls below the minimum level guaranteed for suction. The level can be checked using a float switch, a minimum pressure switch, an external contact, or level probes. For the latter, the probes must be connected to the adjustable sensitivity electronic module. The control panel is already preset for the installation of this module.
- Free contact for fault diagnostic status, for each frequency converter. Electrical contact normally open.

For booster sets requiring a wall mounted control panel (SMB.../WM), the panel is supplied with 5 metre cables.

Other options available:

- SMB.../PA
- SMB.../PE
- SMB.../RE
- SMB.../VA

See the option description on page 17.

In SMB10 booster set series, control panel is available as accessory.

Control panel for two and three electric pumps:
- QESM20 series
- QESM30 series

SMB10 BOOSTER SETS SERIES MAIN COMPONENTS

- **Non return valve** on the delivery of each electric pump, spring type.
- **Delivery side** with threaded ends. It is 5-way connection type.
- **Pressure gauge and transmitters** for control, installed on the delivery side of the set.
- **Pressure tank** 8lt or 24lt depending on the electric pump model
- **Support base** for SMB10../SVE

Optional components:

Sensors
The following sensors are available for electric pump equipped with e-SM drive:
- Pressure-transducer
- Level-sensor.

Versions available

Valves and main components made of AISI 304 or AISI 316 stainless steel;
versions:
SMB.../A304, SMB.../B304, SMB.../C304,
SMB.../A316, SMB.../B316, SMB.../C316

Available in the Z version.

Accessories on request:

- Devices **for protection against dry running** in one of the following versions:
  - float switch
  - level probes (electodes) kit
  - minimum pressure switch
- **Vibration dampers**
- **Control panel**

SMB20, SMB30 BOOSTER SETS SERIES MAIN COMPONENTS

- **Main on-off valves** at the suction and delivery of each electric pump, ball type.
- **Non return valve** on the delivery of each electric pump, spring type.
- **Suction manifold** with threaded ends. Threaded fitting for filling the booster set.
- **Delivery manifold** with threaded ends. It has R1" threaded fittings and isolation valve with drain cock and Hydrotube (depending on the maximum head of the pump, 20/24 lt size)
- **Pressure gauge and transmitters** for control, installed on the delivery manifold of the set.
- **Control panel**.
- **Various fittings** for the connections.
- **Support base** for the pump set and control panel bracket.

Optional components:

Sensors
The following sensors are available for electric pump equipped with e-SM drive:
- Pressure-transducer
- Level-sensor.

Versions available

Manifolds, valves, flanges, base and main components made of AISI 304 or AISI 316 stainless steel;
versions:
SMB.../A304, SMB.../B304, SMB.../C304,
SMB.../A316, SMB.../B316, SMB.../C316

Available in the Z version.

Accessories on request:

- Devices **for protection against dry running** in one of the following versions:
  - float switch
  - level probes (electodes) kit
  - minimum pressure switch
- **Diaphragm expansion vessel kit**
  Hydrotube with on-off valve, depending on the maximum head of the pump:
  - 24 lt, 8 bar hydro tube kit
  - 24 lt, 10 bar hydro tube kit
  - 24 lt, 16 bar hydro tube kit
  - 20 lt, 25 bar hydro tube kit
- **Vibration dampers** sized depending on the set. In some sets, vibration dampers are provided not assembled; installation is care of the customer.

SPECIAL EQUIPMENT ON REQUEST (Contact the Sales and Technical Assistance Service)

- Sets with special valves.
- Sets with stainless steel expansion vessels.

For more information about available accessories, please refer to standard catalog.

SMB BOOSTER SETS SERIES
WORKING LIMITS

The input pressure of the pump, added to the pressure with the port shut off, must not exceed the maximum permitted operating pressure (PN) of the set.

Permitted liquids	Water without gases and corrosive and/or aggressive substances.
Fluid temperature***	5°C to + 60 °C, standard version
	5°C to + 80 °C, A304, B304, C304, A316, B316, C316 version
Ambient temperature**	0°C to + 40 °C
Maximum operating pressure*	Max 16 bar
Minimum input pressure	In line with the NPSH curve and the losses, with a margin of at least 0,5 m
Maximum input pressure	The input pressure added to the pump pressure without flow must be lower than the maximum operating pressure of the set.
Installation	Internal environment protected from atmospheric agents. Away from heat sources. Max altitude 1000 a.s.l. Max humidity 50%, without condensation.

* Higher PN available on request depending on pump type

smb_2p-en_c_ti

** Max. 50 °C for SMB10 without control panel

*** Maximum limit may be lower depending on the type of pump

SOUND EMISSION LEVELS

Table refers to hydraulic performances with one pump running, max rpm, friction loss not included

g10_1-15hmes-esm-2p50-en_a_th

* Maximum value in specified range: P1 = input power; I = input nominal current absorbed by set

** For technical details see technical catalogue of single electric pump

ELECTRIC PUMP SINGLE-PHASE
TABLE OF ELECTRIC MOTOR DATA

The nominal motor power is guaranteed in the 3000-3600 rpm range. The motor is automatically limited to 3600 rpm maximum; the motor works partially loaded below 3000 rpm.

ELECTRIC PUMP THREE-PHASE
TABLE OF ELECTRIC MOTOR DATA

The nominal motor power is guaranteed in the 3000-3600 rpm range. The motor is automatically limited to 3600 rpm maximum; the motor works partially loaded below 3000 rpm.

Table refers to hydraulic performances with three pumps running, max rpm, friction loss not included

g30_1-15hmes-esmT-2p50-en_a_th

* Maximum value in specified range: P1 = input power; I = input nominal current absorbed by set

** For technical details see technical catalogue of single electric pump

LOWARA
a xylem brand

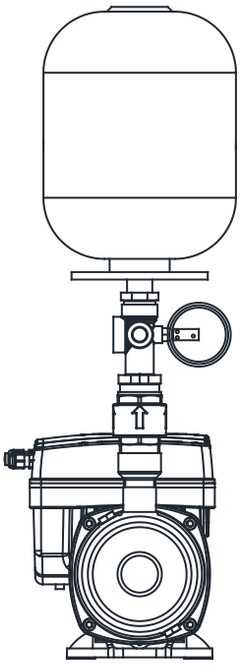

Booster sets

SMB10 Series

MARKET SECTORS
RESIDENTIAL, COMMERCIAL, INDUSTRIAL

APPLICATIONS

Water supply and pressure boosting in:
- apartments, villas, condominiums and residential buildings
- hotels, restaurants, spas
- various industrial applications

SPECIFICATIONS

• **e-SVE** vertical axis electric pump.

• **e-HME..S** horizontal axis electric pump.

• **Flow rate:** up to 30 m^3/h.

• **Head:** up to 158 m.

• **Maximum operating pressure:** max 16 bar.

• **Electric panel supply voltage:**
Standard version:
- single-phase 1 x 230V ± 10% (SMB../2).
- three-phase 3 x 400V ± 10% (SMB../4).
Special version:
- three-phase 3 x 230V ± 10% (SMB../3).

• **Frequency**: 50Hz.

• **Protection class IP55 for:**
- electrical pump motor
- e-SM drive frequency converter

• **Maximum electric pump power:** 2,2 kW.

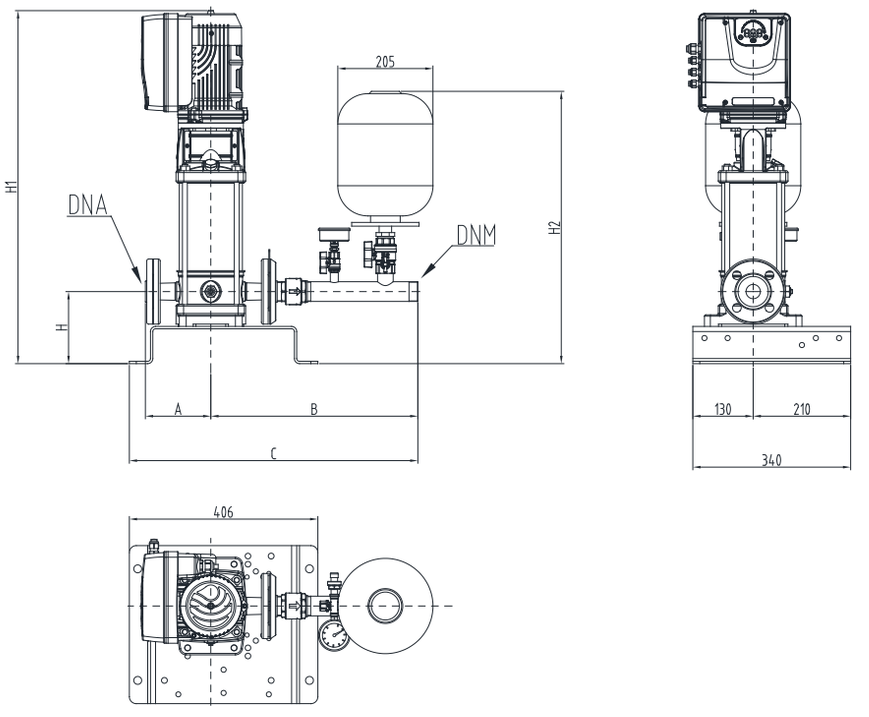

• **Progressive motor start.**

• **Maximum pumped liquid temperature:**
- up to 60 °C for SMB.../SVE
- up to 60 °C for SMB.../HME..S

SMB series booster sets with e-SV Smart and e-HM Smart series pumps are certified for use with drinking water.

- three-phase 3 x 400V ± 10% (SMB../4).
Special version:
- three-phase 3 x 230V ± 10% (SMB../3).

• **Frequency**: 50Hz.

• **Protection class IP55 for:**
- electrical control panel
- electrical pump motor
- e-SM drive frequency converter

• **Maximum electric pump power:** 2 x 2,2 kW.

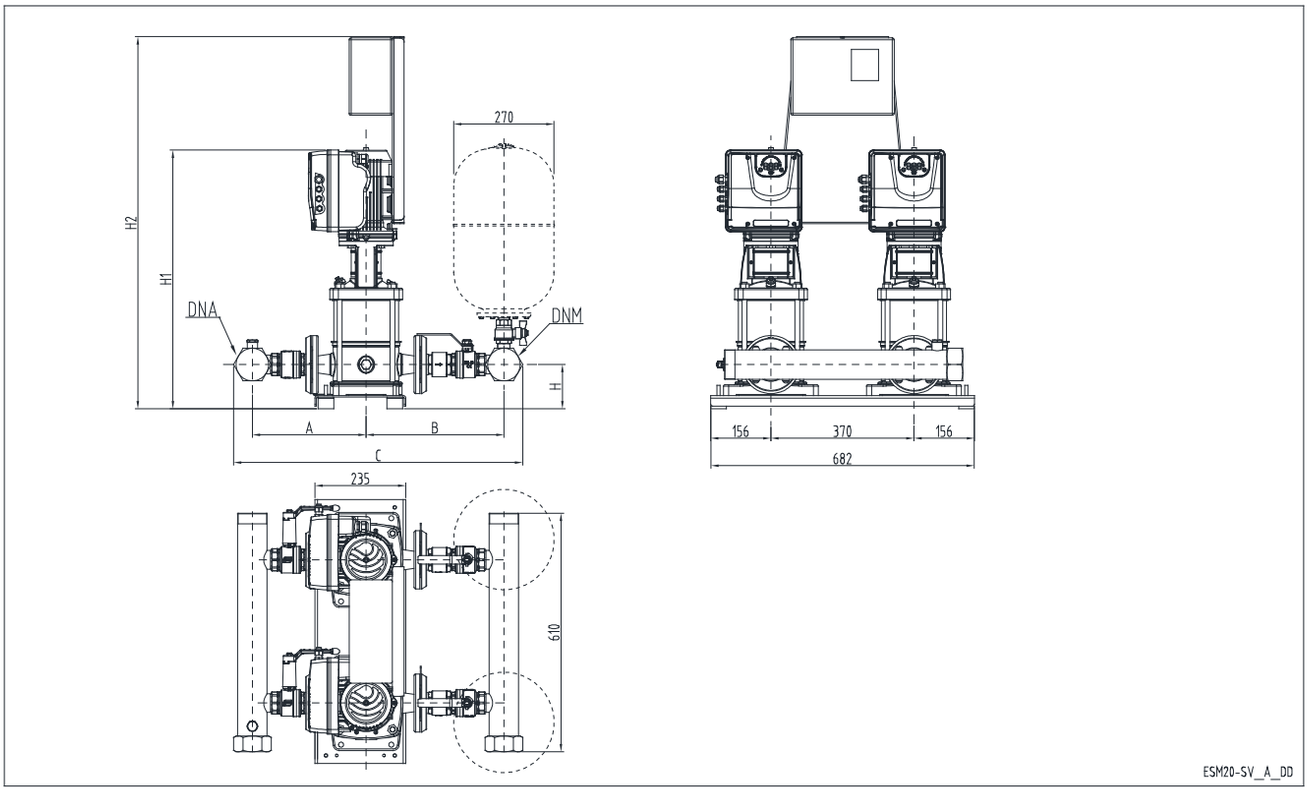

• **Progressive motor start.**

• **Maximum pumped liquid temperature:**
- up to 60 °C for SMB.../SVE
- up to 60 °C for SMB.../HME..S

SMB series booster sets with e-SV Smart and e-HM Smart series pumps are certified for use with drinking water.

Booster sets

MARKET SECTORS
RESIDENTIAL, COMMERCIAL, INDUSTRIAL

SMB30 Series

APPLICATIONS

Water supply and pressure boosting in:
- apartments, villas, condominiums and residential buildings.
- hotels, restaurants, spas.
- various industrial applications.

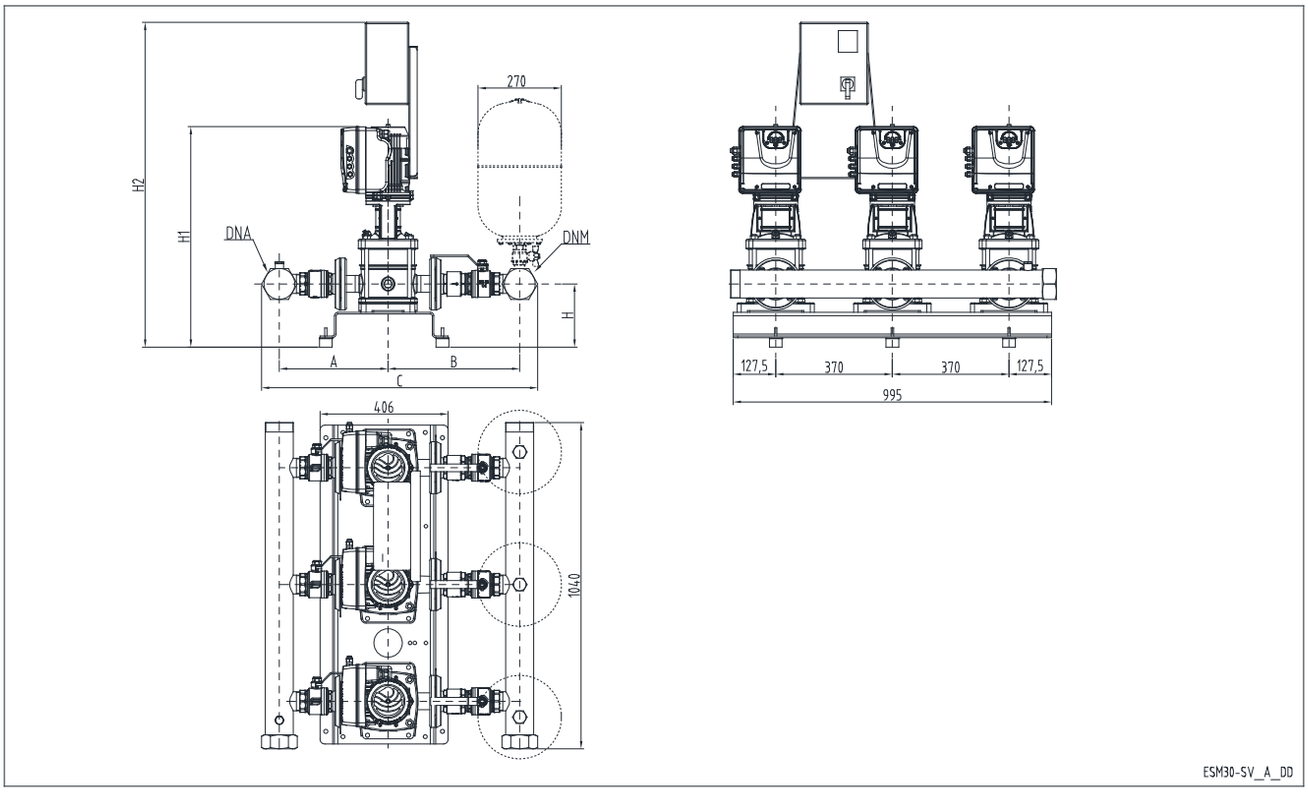

SPECIFICATIONS

- **e-SVE** vertical axis electric pump.
- **e-HME..S** horizontal axis electric pump.
- **Flow rate:** up to 90 m^3/h.
- **Head:** up to 158 m.
- **Maximum operating pressure:** max 16 bar.
- **Electric panel supply voltage:**
  Standard version:
  - single-phase 1 x 230V ± 10% (SMB../2).
  - three-phase 3 x 400V ± 10% (SMB../4).
  Special version:
  - three-phase 3 x 230V ± 10% (SMB../3).
- **Frequency**: 50Hz.
- **Protection class IP55 for:**
  - electrical control panel
  - electrical pump motor
  - e-SM drive frequency converter
- **Maximum electric pump power:** 3 x 2,2 kW.
- **Progressive motor start.**
- **Maximum pumped liquid temperature:**
  - up to 60 °C for SMB.../SVE
  - up to 60 °C for SMB.../HME..S

SMB series booster sets with e-SV Smart and e-HM Smart series pumps are certified for use with drinking water.

PERFORMANCE CURVES

SMB.../SVE BOOSTER SETS SERIES
OPERATING CHARACTERISTICS

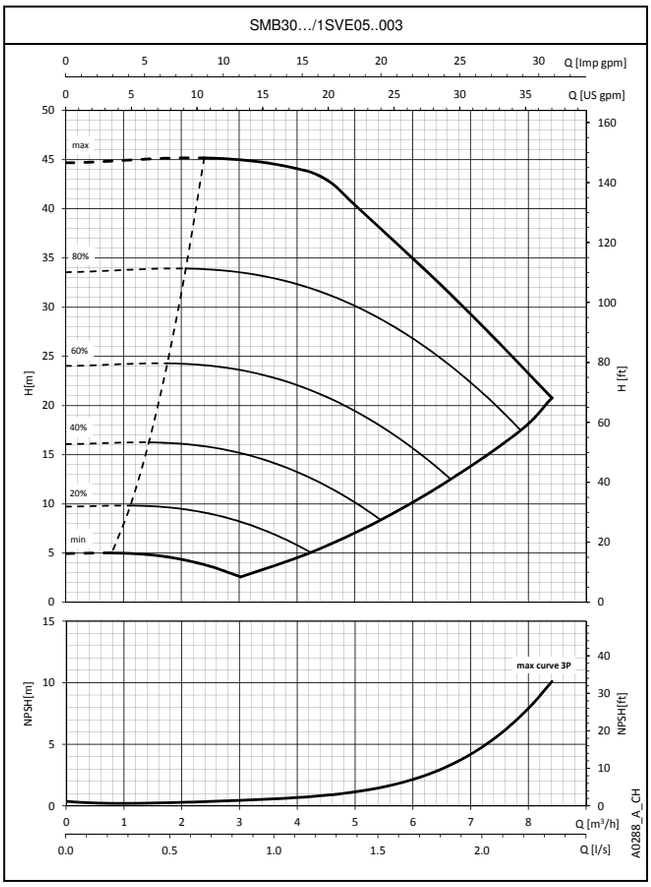

1SVE05..003

SMB20.../1SVE05..003

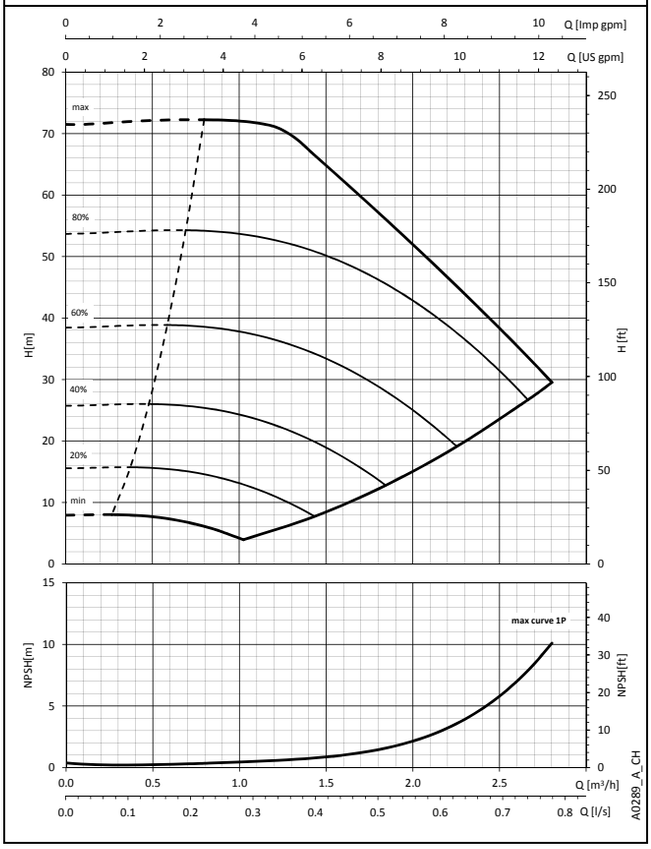

SMB30.../1SVE05..003

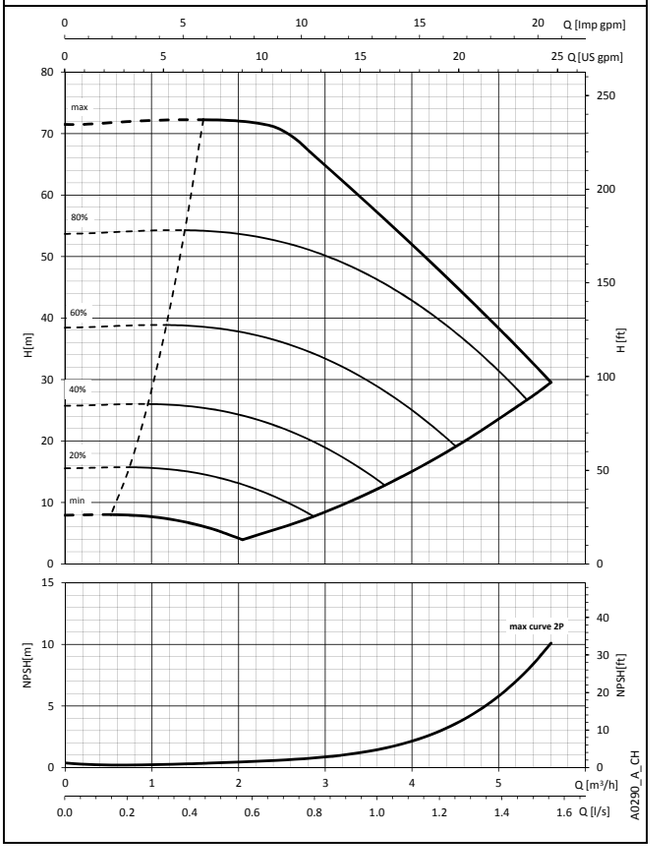

The performance curves do not take into account flow resistance in the valves and piping.
The curves show the performance with one, two and three pumps running.
These performances are valid for liquids with density $\rho = 1$ Kg/dm^3 and kinematic viscosity $\nu = 1$ mm^2/sec.
The declared NPSH values are laboratory values; for practical use we recommend increasing these values by 0,5 m.

SMB20.../1SVE08..005

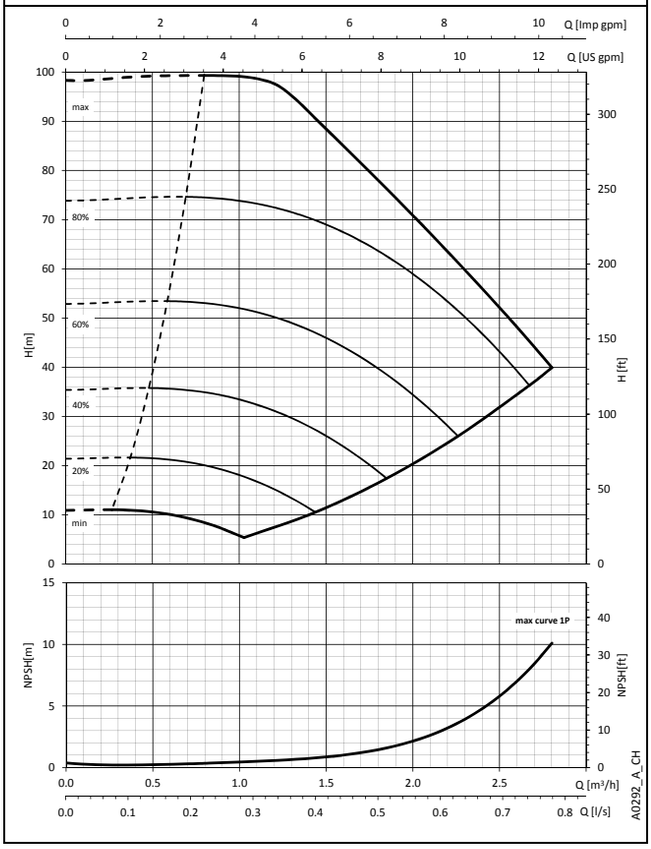

SMB30.../1SVE08..005

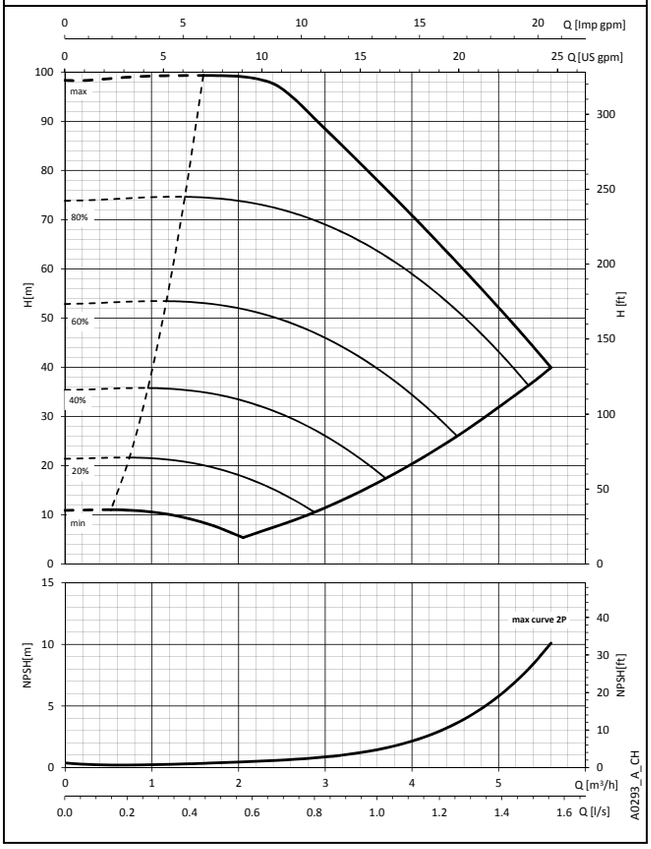

The performance curves do not take into account flow resistance in the valves and piping.
The curves show the performance with one, two and three pumps running.
These performances are valid for liquids with density $\rho = 1$ Kg/dm^3 and kinematic viscosity $\nu = 1$ mm^2/sec.
The declared NPSH values are laboratory values; for practical use we recommend increasing these values by 0,5 m.

ACCESSORIES

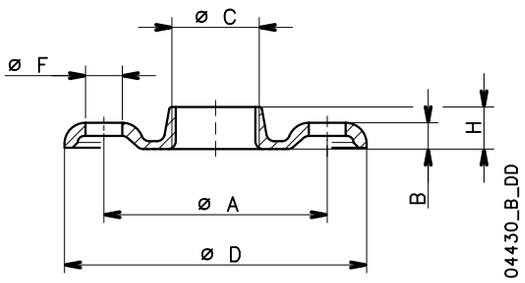

FLANGE KIT

Manifolds are supplied with threaded attachments and caps for sealing the unused ends.
For these manifolds, stainless steel AISI 304 or 316 flanges for connection to the system are available on request.

Gcom-ctf-tonde-s-en_d_td

ANTI-VIBRATION JOINT KIT

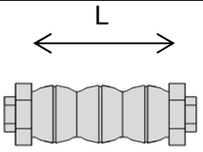

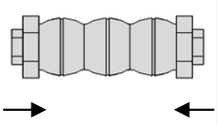

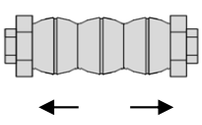

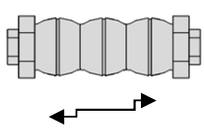

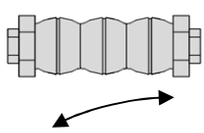

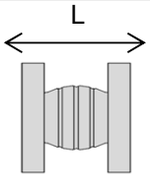

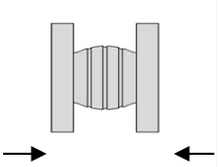

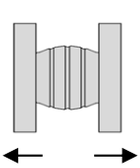

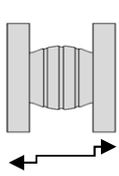

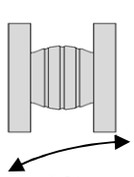

Anti-vibration joints, or compensation joints, can be used to absorb deformations, expansions, pipe noise and reduce water hammering. They can also withstand a high level of vacuum, which enables the absorption of negative expansions due to depression.

Due to its elasticity, the material can deform or expand as necessary, making installation easier, simpler and quicker, even when the piping is not aligned.

The drinking water certificates are valid for the standard booster configuration. Please check with your Sales representative the drinking water certifications applicable for boosters equipped with fitted joints.

For more information, please contact the sales network.

PROTECTION SYSTEMS AGAINST DRY RUNNING

To avoid damaging the pumps, protection systems must be used to prevent it from dry running.

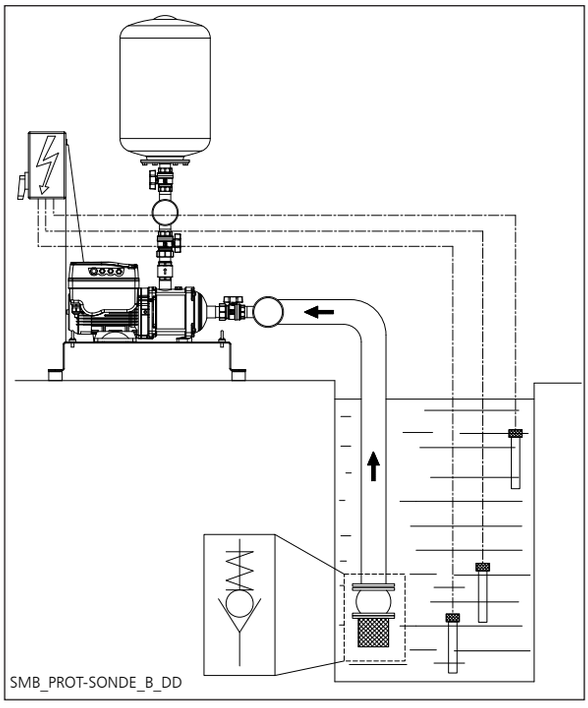

FLOAT SWITCH PROTECTION

The float switch system is used for supplies from open tanks. The float switch immersed in the tank must be connected to the control panel.
If there is no water, the float switch opens the electrical contact and the electric pumps stop.

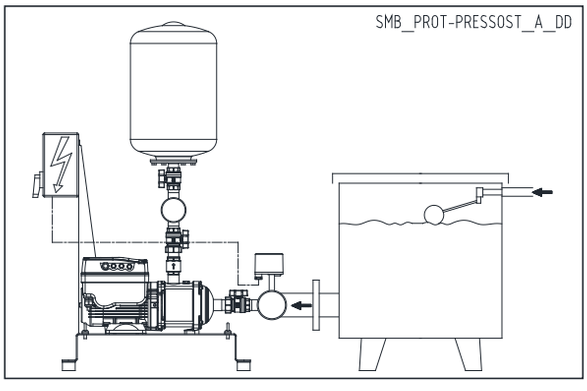

ELECTRODE PROBE PROTECTION

The system with electrode probes is used for supplies from open tanks or wells.
Three probes are directly connected to the electric module with adjustable sensitivity that can be installed in the control panel.
If there is no water, the control circuit opens the electrical contact and the electric pumps stop.

MINIMUM PRESSURE SWITCH PROTECTION

The system with minimum pressure switch is used for water supplies from pressurised networks or tanks. The pressure switch is connected to the control panel. In case of water shortage, it opens the electric contact, causing the stop of the electric pumps.

PROTECTION SENSOR AGAINST DRY RUNNING

Sensor for detecting the presence of water based on the optoelectronic principle, therefore non-invasive and with no moving parts. The sensor features an electronic contact (on/off) which stops the pump if there is no water in the seal area.
The sensor opens the electric contact if there is no water after they factory-set delay (10 seconds) elapses. The sensor is supplied as a kit complete with 2 metres of cable, an EPDM O-ring gasket and a stainless steel adapter.

General operating features

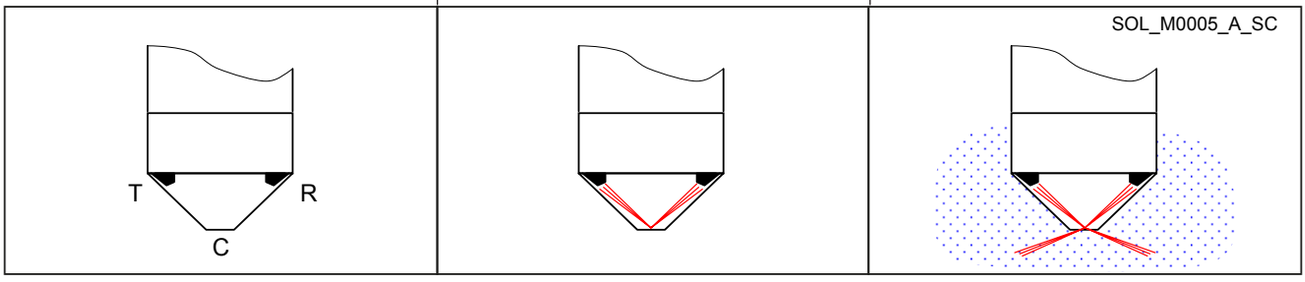

- **KIT SENSOR DRP-GP: 21÷27 Vca**: in the boosters sets the sensor is assembled on the suction manifold with a specific hydraulic fitting. (SMB20../DR1 and SMB30../DR1 booster set versions).
  21÷27 Vac, universal solid state output for external relay at 24 Vac (21÷27 Vac, 50 mA).
- **KIT SENSOR DRP-HV: 15÷25 Vcc**: the sensor can also be fitted directly on the filling cap of the e-SV pumps series. (SMB20../DR2, SMB30../DR3 booster set versions).
  15÷25 Vdc, NPN output at 25 V (10 mA) for HYDROVAR inverter and e-SM drive.
- Operation is independent of the hardness and conductivity of the water. The sensor cannot detect frozen liquids.

Operating principle

Operation is based on the change in the refractive index on the surfaces. The optic sensor comprises a glass cap (C) containing a transmitter (T) and an infrared receiver (R).

If there is no liquid, all the infrared light emitted by the transmitter is internally reflected by the surface of the glass cap of the receiver.
The electronic contact will be open.

If liquid is present, the refractive index of the surface changes. Most of the infrared light emitted by the transmitter is dispersed in the liquid. The receiver receives less light and the electronic contact is closed.

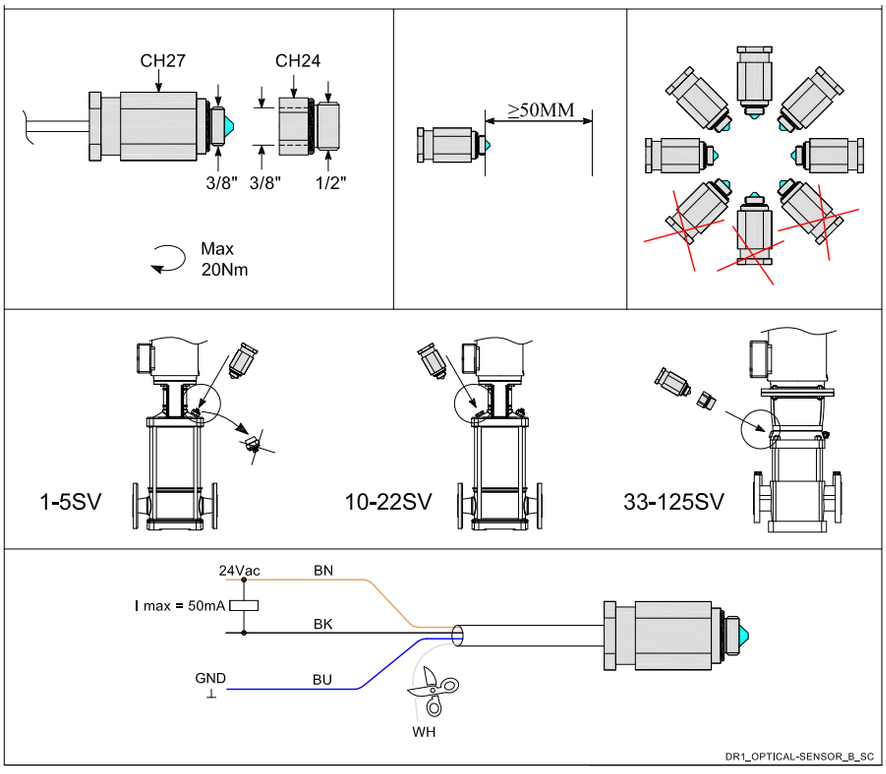

SPECIFICATIONS

- Materials:
  - Body in AISI 316L stainless steel
  - Glass optic cap
  - EPDM gasket
- Liquids: clean water, demi water. Operation is not affected by the hardness and conductivity of the liquid. To check the suitably of other liquids, contact the Lowara technical assistance service providing the characteristics of the liquid.
- Temperature of liquid: -20°C÷+120°C (cannot be used to detect frozen liquids).
- Ambient temperature: -5°C ÷+50°C
- Maximum pressure (PN): 25 bar
- Connector: 3/8 " (3/8" x 1/2" adaptor plug included in the Kit)
- Dimensions: 27x 60 mm
- IP55 protection
- Electrical characteristics:
  - Input voltage SENSOR KIT DRP-GP: 21÷27 Vac
    SENSOR KIT DRP-HV: 15÷25 Vdc
  - Output SENSOR KIT DRP-GP: universal solid state 21÷27 Vac (50 mA) for 24 Vac external relay
    SENSOR KIT DRP-HV: NPN 25 V (10 mA) for HYDROVAR™ inverter and e-SM drive
  - Alarm delay: 10 seconds (factory setting)
  - FROR cable 4 x 0,34 mm^2 (PVC-CEI 20-22) 2 metres long.

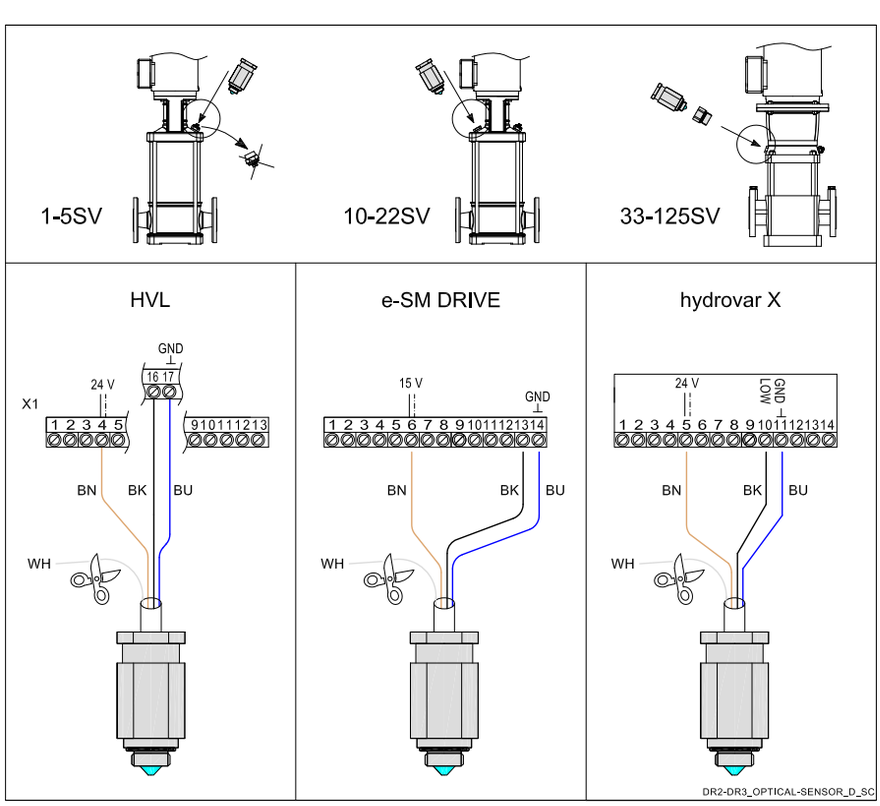

WIRING DIAGRAM

KIT SENSOR DRP-GP (code 109394610)

KIT SENSOR DRP-HV (code 109394600)

The sensor can be directly mounted on the filling plug of the e-SV pumps.
For the 33, 46, 66, 92, 125SV series, the 3/8" x 1/2" adaptor ring included in the kit must also be installed.

		hr												36,2	18,9	6,36	2,62	1,24	0,65

The hr values must be multiplied by:

0,71 for galvanized or painted steel pipes

0,54 for stainless steel or copper pipes

0,47 for PVC or PE pipes

hr = flow resistance for 100 m of straight pipeline (m)

V = water speed (m/s)

G-at-pct-en_b_th

FLOW RESISTANCE
TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate valve	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Foot check valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en_b_th

The table is valid for the Hazen Williams coefficient C=100 (cast iron pipework)
for galvanized steel or painted steel multiply the values by 0,71;
for stainless steel and copper multiply the values by 0,54;
for Pvc and PE multiply the values by 0,47.

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table in the previous page.
The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

FURTHER PRODUCT SELECTION AND DOCUMENTATION
Xylect

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

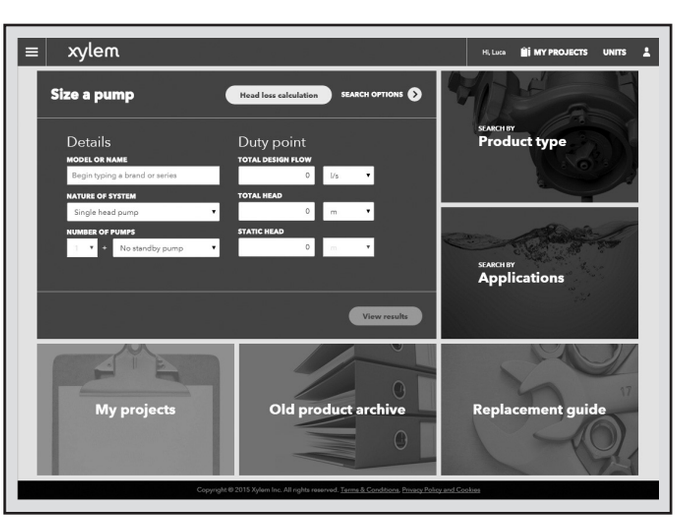

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

The search by application guides users not familiar with the product range to the right choice.

FURTHER PRODUCT SELECTION AND DOCUMENTATION
Xylect

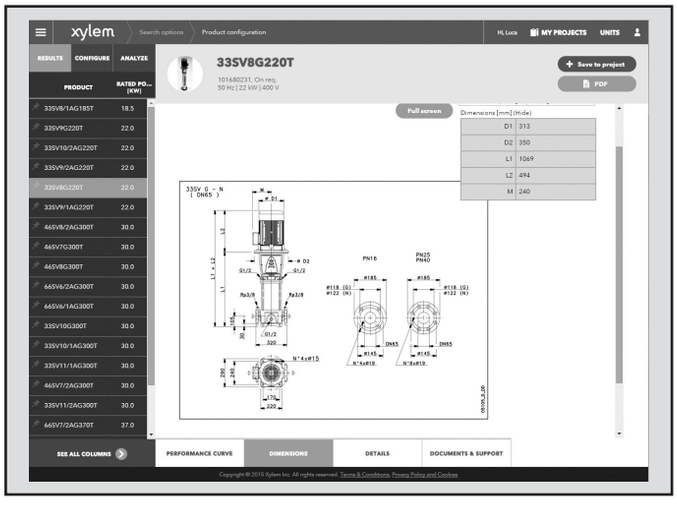

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every registered user has a proper space, where all projects are saved.

For more information about Xylect please contact our sales network or visit www.xylect.com.

Dimensional drawings appear on the screen and can be downloaded in dxf format.

Xylem |'zīləm|

1) The tissue in plants that brings water upward from the roots;
2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
